INVESTOR IN PEOPLE

The Patent Office  
Concept House  
Cardiff Road  
Newport  
South Wales  
NP10 8QQ

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

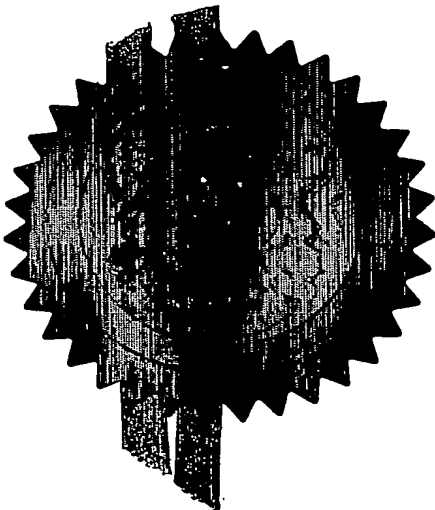

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

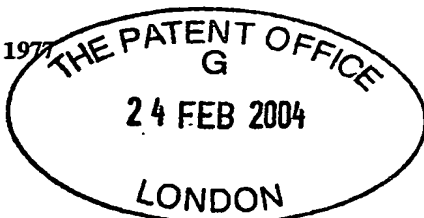

Signed

*Andrew Gersey*

**Warning**

*After an application for a Patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission unless an application has been filed at least six weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.*

**Notes**

- a) If you need help to fill in this form or you have any questions, please contact the Patent Office on 0645 500505
- b) Write your answers in capital letters using black ink or you may type them.
- c) If there is not enough space for all relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- d) If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- f) For details of the fee and ways to pay please contact the Patent Office.

**Patents Form 1/77**

### Compounds

The present invention relates to novel pyridine derivatives, pharmaceutical compositions containing these compounds and their use in the treatment of diseases, particularly pain, which diseases are caused directly or indirectly by an increase or decrease in activity of the cannabinoid receptor.

Cannabinoids are a specific class of psychoactive compounds present in Indian cannabis (*Cannabis sativa*), including about sixty different molecules, the most representative being cannabitol, cannabidiol and several isomers of tetrahydrocannabinol. Knowledge of the therapeutic activity of cannabis dates back to the ancient dynasties of China, where, 5,000 years ago, cannabis was used for the treatment of asthma, migraine and some gynaecological disorders. These uses later became so established that, around 1850, cannabis extracts were included in the US Pharmacopoeia and remained there until 1947.

Cannabinoids are known to cause different effects on various systems and/or organs, the most important being on the central nervous system and on the cardiovascular system. These effects include alterations in memory and cognition, euphoria, and sedation. Cannabinoids also increase heart rate and vary systemic arterial pressure. Peripheral effects related to bronchial constriction, immunomodulation, and inflammation have also been observed. The capability of cannabinoids to reduce intraocular pressure and to affect respiratory and endocrine systems is also well documented. See e.g. L.E. Hollister, Health Aspects of Cannabis, Pharmacological Reviews, Vol. 38, pp. 1-20, (1986). More recently, it was found that cannabinoids suppress the cellular and humoral immune responses and exhibit antiinflammatory properties. Wirth et al., Antiinflammatory Properties of Cannabichrome, Life Science, Vol. 26, pp. 1991-1995, (1980).

In spite of the foregoing benefits, the therapeutic use of cannabis is controversial, both due to its relevant psychoactive effects (causing dependence and addiction), and due to manifold side effects that have not yet been completely clarified. Although work in this field has been ongoing since the 1940's, evidence indicating that the peripheral effects of cannabinoids are directly mediated, and not secondary to a CNS effect, has been limited by the lack of receptor characterization, the lack of information concerning an endogenous cannabinoid ligand and, until recently, the lack of receptor subtype selective compounds.

The first cannabinoid receptor was found to be mainly located in the brain, in neural cell lines, and, only to a lesser extent, at the peripheral level. In view of its location, it was called the central receptor ("CB1"). See Matsuda et al., "Structure of a Cannabinoid Receptor and Functional Expression of the Cloned cDNA," Nature, Vol. 346, pp. 561-564 (1990). The second cannabinoid receptor ("CB2") was identified in the spleen, and was assumed to modulate the non psychoactive effects of the cannabinoids. See Munro et al., "Molecular Characterization of a Peripheral Receptor for Cannabinoids," Nature, Vol. 365, pp. 61-65 (1993).

Recently, some compounds have been prepared which are capable of acting as agonists on both the cannabinoid receptors. For example, use of derivatives of dihydroxypyrrrole-(1,2,3-d,e)-1,4-benzoxazine in the treatment of glaucoma and the use of derivatives of 1,5-diphenyl-pyrazole as immunomodulators or psychotropic agents in the treatment of various neuropathologies, migraine, epilepsy, glaucoma, etc are known. See U.S. Patent No. 5,112,820 and EP 576357,

respectively. However, because these compounds are active on both the CB1 and CB2 receptor, they can lead to serious psychoactive effects.

The foregoing indications and the preferential localization of the CB2 receptor in the immune system confirms a specific role of CB2 in modulating the immune and antiinflammatory response to stimuli of different sources.

The total size of the patient population suffering from pain is vast (almost 300 million), dominated by those suffering from back pain, osteo-arthritic pain and post-operative pain. Neuropathic pain (associated with neuronal lesions such as those induced by diabetes, HIV, herpes infection, or stroke) occurs with lower, but still substantial prevalence, as does cancer pain.

The pathogenic mechanisms that give rise to pain symptoms can be grouped into two main categories:

- those that are components of inflammatory tissue responses (Inflammatory Pain);
- those that result from a neuronal lesion of some form (Neuropathic Pain).

Chronic inflammatory pain consists predominantly of osteoarthritis, chronic low back pain and rheumatoid arthritis. The pain results from acute and on-going injury and/or inflammation. There may be both spontaneous and provoked pain.

There is an underlying pathological hypersensitivity as a result of physiological hyperexcitability and the release of inflammatory mediators which further potentiate this hyperexcitability. CB2 receptors are expressed on inflammatory cells (T cells, B cells, macrophages, mast cells) and mediate immune suppression through inhibition of cellular interaction/ inflammatory mediator release. CB2 receptors may also be expressed on sensory nerve terminals and therefore directly inhibit hyperalgesia.

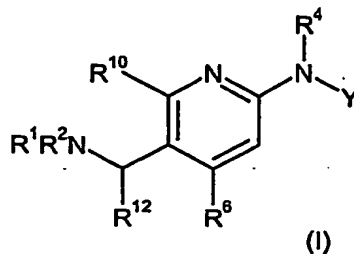

The role of CB2 in immunomodulation, inflammation, osteoporosis, cardiovascular, renal and other disease conditions is now being examined. In light of the fact that cannabinoids act on receptors capable of modulating different functional effects, and in view of the low homology between CB2 and CB1, the importance of developing a class of drugs selective for the specific receptor sub-type is evident. The natural or synthetic cannabinoids currently available do not fulfil this function because they are active on both receptors.

Based on the foregoing, there is a need for compounds which are capable of selectively modulating the receptor for cannabinoids and, therefore, the pathologies associated with such receptors. Thus, CB2 modulators offer a unique approach toward the pharmacotherapy of immune disorders, inflammation, osteoporosis, renal ischemia and other pathophysiological conditions.

The present invention provides novel pyridine derivatives of formula (I) and pharmaceutically acceptable derivatives thereof, pharmaceutical compositions containing these compounds or derivatives, and their use as CB2 receptor modulators, which are useful in the treatment of a variety of disorders.

The present invention further comprises a method for treating disease mediated by CB2 receptors in an animal, including humans, which comprises administering to an animal in need thereof an effective amount of a compound of formula (I) or a pharmaceutically acceptable derivative thereof.

The invention provides compounds of formula (I):

wherein:

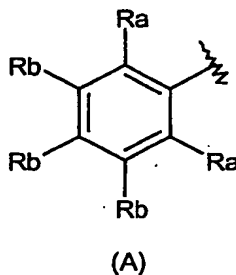

Y is phenyl, unsubstituted or substituted with one, two or three substituents;

R<sup>1</sup> is selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-6</sub> cycloalkyl, or halosubstituted C<sub>1-6</sub> alkyl;

R<sup>2</sup> is (CH<sub>2</sub>)<sub>m</sub>R<sup>3</sup> where m is 0 or 1;

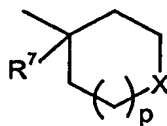

or R<sup>1</sup> and R<sup>2</sup> together with N to which they are attached form an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl ring;

R<sup>3</sup> is an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl group, an unsubstituted or substituted C<sub>3-8</sub> cycloalkyl group, an unsubstituted or substituted straight or branched C<sub>1-10</sub> alkyl, an unsubstituted or substituted C<sub>5-7</sub> cycloalkenyl, R<sup>5</sup> or R<sup>3</sup> is an optionally substituted 5- to 6- membered aromatic heterocyclyl group, or group A:

R<sup>4</sup> is selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-6</sub> cycloalkyl, or halosubstituted C<sub>1-6</sub> alkyl, COCH<sub>3</sub>, or SO<sub>2</sub>Me;

R<sup>5</sup> is

wherein p is 0, 1 or 2, and X is CH<sub>2</sub>, O, S, SO or SO<sub>2</sub>;

R<sup>6</sup> is halo, an substituted or unsubstituted (C<sub>1-6</sub>)alkyl, substituted or unsubstituted (C<sub>3-6</sub>)cycloalkyl, or a 4- to 7- membered non aromatic heterocyclic group and R<sup>10</sup> is hydrogen or R<sup>10</sup> is halo, an substituted or unsubstituted (C<sub>1-6</sub>)alkyl, substituted or unsubstituted (C<sub>3-6</sub>)cycloalkyl, or a 4- to 7- membered non aromatic heterocyclic group and R<sup>6</sup> is hydrogen:

R<sup>7</sup> is OH, C<sub>1-6</sub>alkoxy, NR<sup>8a</sup>R<sup>8b</sup>, NHCOR<sup>9</sup>, NHSO<sub>2</sub>R<sup>9</sup>, SOqR<sup>9</sup>;

R<sup>8a</sup> is H or C<sub>1-6</sub>alkyl;

R<sup>8b</sup> is H or C<sub>1-6</sub>alkyl;

R<sup>9</sup> is C<sub>1-6</sub>alkyl;

R<sup>12</sup> is hydrogen or C<sub>1-6</sub>alkyl;

q is 0, 1 or 2;

Ra can be independently selected from hydrogen, fluoro, chloro or trifluoromethyl;  
 Rb can be independently be selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>1-6</sub> alkoxy, haloC<sub>1-6</sub> alkoxy, hydroxy, cyano, halo, sulfonyl, CONH<sub>2</sub>, COOH or NHCOOC<sub>1-6</sub>alkyl;  
 and pharmaceutically acceptable derivatives thereof.

In one embodiment Y is a substituted phenyl. In one embodiment Y is substituted by 1 or 2 substituents.

In one embodiment R<sup>1</sup> is hydrogen.

In one embodiment R<sup>4</sup> is C<sub>1-6</sub> alkyl or hydrogen, for example methyl or hydrogen, alternatively hydrogen.

In one embodiment R<sup>6</sup> is isopropyl, cyclopropyl, trifluoromethyl or *t*-butyl.

In one embodiment R<sup>10</sup> is hydrogen

In one embodiment R<sup>7</sup> is OH.

In one embodiment X is CH<sub>2</sub>.

In one embodiment R<sup>3</sup> is an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl group, or an unsubstituted or substituted C<sub>3-8</sub> cycloalkyl group.

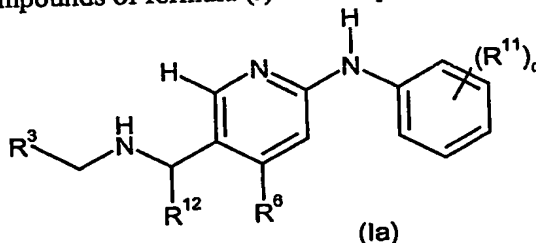

When Y is substituted, the substituent or substituents may be selected from: C<sub>1-6</sub> alkyl, halosubstitutedC<sub>1-6</sub> alkyl, C<sub>1-6</sub> alkoxy, a hydroxy group, a cyano group, halo, a C<sub>1-6</sub>alkyl sulfonyl group, -CONH<sub>2</sub>, -NHCOCH<sub>3</sub>, -COOH, halosubstituted C<sub>1-6</sub> alkoxy, or SO<sub>2</sub>NR<sup>8a</sup>R<sup>8b</sup> wherein R<sup>8a</sup> and R<sup>8b</sup> are as defined above.

In one embodiment Y is substituted by halo, cyano, methyl, trifluoromethyl, methoxy or trifluoromethoxy.

In one particular embodiment R<sup>3</sup> is pyridinyl, pyrimidinyl, imidazolyl, oxadiazolyl, triazolyl or pyrazinyl any of which can be unsubstituted or substituted or is group A, In one particular embodiment R<sup>3</sup> is group A, pyridinyl or pyrimidinyl. In a further embodiment R<sup>3</sup> is group A or pyridinyl.

In one particular embodiment Rb is selected from halo, methoxy, and cyano.

In one embodiment compounds of formula (I) are compounds of formula (Ia):

R<sup>3</sup> is an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl group, or an unsubstituted or substituted C<sub>3-8</sub> cycloalkyl group.

R<sup>6</sup> is isopropyl, cyclopropyl, trifluoromethyl or *t*-butyl;

R<sup>11</sup> is selected from halo, cyano, methyl, trifluoromethyl, methoxy or trifluoromethoxy;

R<sup>12</sup> is hydrogen or C<sub>1-6</sub>alkyl;

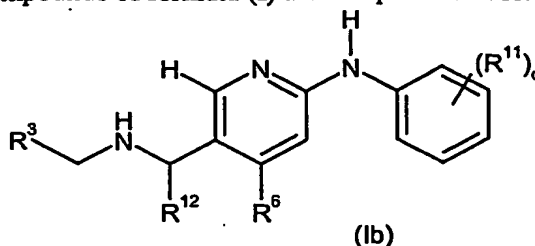

d is 0, 1, 2 or 3;

and pharmaceutically acceptable derivatives thereof.

In one embodiment R<sup>3</sup> is (C<sub>3-6</sub>)cycloalkyl for example cyclobutyl or cyclopropyl

In one embodiment  $R^6$  is isopropyl.

In one embodiment compounds of formula (I) are compounds of formula (Ib):

$R^3$  is an optionally substituted 5- to 6- membered aromatic heterocyclyl group, or group A:

$R^6$  is isopropyl, cyclopropyl, trifluoromethyl or *t*-butyl

$R^{11}$  is selected from halo, cyano, methyl, trifluoromethyl, methoxy or trifluoromethoxy;

$R^{12}$  is hydrogen or  $C_{1-6}$ alkyl;

$d$  is 0, 1, 2 or 3;

and pharmaceutically acceptable derivatives thereof.

In one embodiment  $R^{12}$  is hydrogen or methyl, suitably hydrogen.

When  $R^1$  and  $R^2$  together with N to which they are attached form a 4- to 8- membered non-aromatic heterocyclyl ring which is substituted, or when  $R^3$  is substituted, the substituent or substituents may be selected from:  $C_{1-6}$  alkyl,  $C_{1-6}$  alkoxy, a hydroxy group, halosubstituted  $C_{1-6}$ alkyl, halosubstituted  $C_{1-6}$ alkox, a cyano group, halo or a sulfonyl group, methylsulfonyl,  $NR^{8a}R^{8b}$ ,  $CONH_2$ ,  $NHCOCH_3$ , ( $=O$ ),  $COOH$ ,  $CONHCH_3$  and  $NHSO_2CH_3$  wherein  $R^{8a}$  and  $R^{8b}$  are as described above.

In one particular embodiment when  $R^3$  is an 5- to 6- membered aromatic heterocyclyl group the substituents are halo, methoxy, and cyano.

When  $R^1$  and  $R^2$  together with N to which they are attached form a 4- to 8- membered non-aromatic heterocyclyl ring which is substituted, or when  $R^3$  is substituted there can be 1, 2 or 3 substituents.

When  $R^6$  is substituted by 1, 2 or 3 substituents the substituent or substituents may be selected from OH, halo, cyano,  $C_{1-6}$ alkoxy,  $NR^{8a}R^{8b}$ ,  $NHCOR^9$ ,  $NHSO_2R^9$ ,  $SO_2R^9$ ; wherein  $R^{8a}$ ,  $R^{8b}$ ,  $R^9$ , and  $q$  are defined above.

In one embodiment the compounds are 100 fold selective i.e. compounds of formula (I) have an  $EC_{50}$  value at the cloned human cannabinoid CB2 receptor of at least 100 times the  $EC_{50}$  values at the cloned human cannabinoid CB1 receptor or have less than 10% efficacy at the CB1 receptor.

The invention is described using the following definitions unless otherwise indicated.

The term "pharmaceutically acceptable derivative" means any pharmaceutically acceptable salt, ester, salt of such ester or solvate of the compounds of formula (I), or any other compound which upon administration to the recipient is capable of providing (directly or indirectly) a compound of formula (I) or an active metabolite or residue thereof.

It will be appreciated by those skilled in the art that compounds of formula (I) may be modified to provide pharmaceutically acceptable derivatives thereof at any of the functional groups

in the compounds, and that the compounds of formula (I) may be derivatised at more than one position.

It will be appreciated that, for pharmaceutical use, the salts referred to above will be physiologically acceptable salts, but other salts may find use, for example in the preparation of compounds of formula (I) and the physiological acceptable salts thereof. Pharmaceutically acceptable salts include those described by Berge, Bighley and Monkhouse, *J. Pharm. Sci.*, 1977, 66, 1-19. The term "pharmaceutically acceptable salts" includes salts prepared from pharmaceutically acceptable non-toxic bases including inorganic bases and organic bases. Salts derived from inorganic bases include aluminum, ammonium, calcium, copper, ferric, ferrous, lithium, magnesium, manganous, potassium, sodium, zinc, and the like. Salts derived from pharmaceutically acceptable organic non-toxic bases include salts of primary, secondary, and tertiary amines, substituted amines including naturally occurring substituted amines, cyclic amines, and basic ion exchange resins, such as arginine, betaine, caffeine, choline, N,N'-dibenzylethylenediamine, diethylamine, 2-diethylaminoethanol, 2-dimethylaminoethanol, ethanolamine, ethylenediamine, N-ethyl-morpholine, N-ethylpiperidine, glucamine, glucosamine, histidine, hydrabamine, isopropylamine, lysine, methylglucamine, morpholine, piperazine, piperidine, polyamine resins, procaine, purines, theobromine, triethylamine, trimethylamine, tris(hydroxymethyl) amino methane, tripropyl amine, tromethamine, and the like. When the compound of the present invention is basic, salts may be prepared from pharmaceutically acceptable non-toxic acids, including inorganic and organic acids. Such acids include acetic, benzenesulfonic, benzoic, camphorsulfonic, citric, ethanesulfonic, fumaric, gluconic, glutamic, hydrobromic, hydrochloric, isethionic, lactic, maleic, malic, mandelic, methanesulfonic, mucic, nitric, pantoic, pantothenic, phosphoric, succinic, sulfuric, tartaric, p-toluenesulfonic acid, and the like.

Examples of pharmaceutically acceptable salts include the ammonium, calcium, magnesium, potassium, and sodium salts, and those formed from maleic, fumaric, benzoic, ascorbic, pantoic, succinic, hydrochloric, sulfuric, bismethylenesalicylic, methanesulfonic, ethanedisulfonic, propionic, tartaric, salicylic, citric, gluconic, aspartic, stearic, palmitic, itaconic, glycolic, p-aminobenzoic, glutamic, benzenesulfonic, cyclohexylsulfamic, phosphoric and nitric acids.

The terms 'halogen or halo' are used to represent fluorine, chlorine, bromine or iodine.

The term 'alkyl' as a group or part of a group means a straight or branched chain alkyl group or combinations thereof, for example a methyl, ethyl, n-propyl, i-propyl, n-butyl, s-butyl, t-butyl, pentyl, hexyl, 1,1-dimethylethyl, or combinations thereof.

The term 'alkoxy' as a group or as part of a group means a straight, branched or cyclic chain alkyl group having an oxygen atom attached to the chain, for example a methoxy, ethoxy, n-propoxy, i-propoxy, n-butoxy, s-butoxy, t-butoxy group, pentoxy, hexyloxy group, cyclopentoxy or cyclohexyloxy group.

The term 'cycloalkyl' means a closed 4- to 8- membered non-aromatic ring, for example cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl, or cyclooctyl.

The term 'cycloalkenyl' means a closed non-aromatic carbon ring containing 1 or more double bonds, for example cyclobutenyl, cyclopentenyl, cyclohexenyl or cycloheptenyl, or cyclooctenyl.

The term 'alkynyl' as a group or part of a group means a straight or branched chain carbon chain or combinations containing 1 or more triple carbon bonds for example a ethynyl, propynyl, butynyl, pentynyl, hexynyl or combinations thereof.

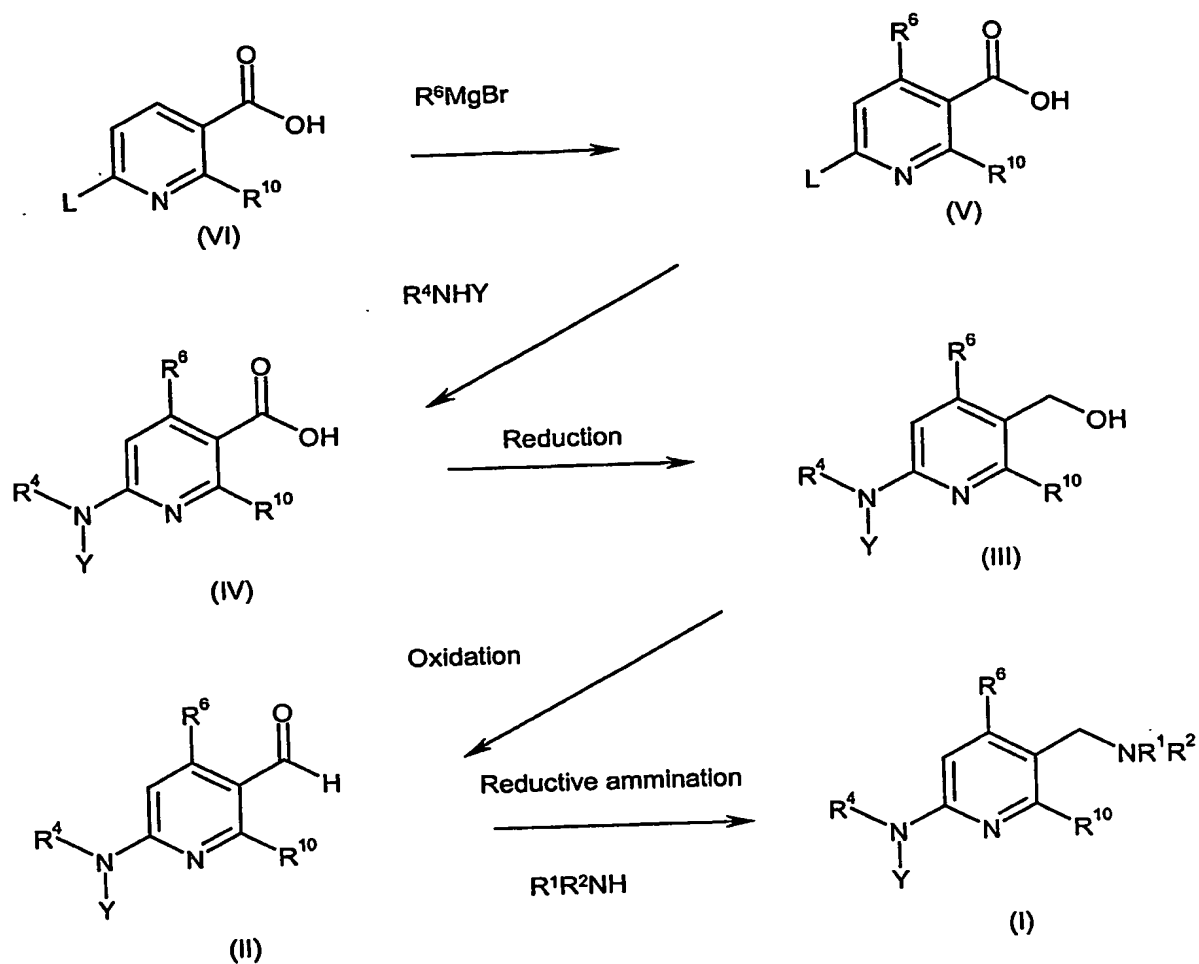

The term 'aryl' means a 5- or 6- membered aromatic ring, for example phenyl, or a 7- to 12-membered bicyclic ring system where at least one of the rings is aromatic, for example naphthyl.

When  $R^1$  and  $R^2$  taken together with the N to which they are attached form an optionally substituted non-aromatic heterocyclyl ring, the ring may optionally contain 1, 2, 3 or 4 further hetero atoms. The ring may be saturated or unsaturated. In one embodiment the further hetero atoms are selected from oxygen, nitrogen or sulphur. An example of a 4 membered heterocyclyl ring is azetidiny. Examples of 5- membered heterocyclyl rings include pyrrolidiny. Examples of 6-membered heterocyclyl rings are morpholinyl, piperizinyl or piperidinyl. An additional example is tetrahydropyridiny. Examples of a 7- membered heterocyclyl ring are azapine or oxapine. Examples of 8-membered heterocyclyl rings are azacyclooctanyl, azaoxacyclooctanyl or azathiacyclooctanyl.

When  $R^3$  or  $R^6$  is an optionally substituted non-aromatic heterocyclyl group, the ring may contain 1, 2, 3, or 4 hetero atoms. In one embodiment the hetero atoms are selected from oxygen, nitrogen or sulphur. Examples of 4- membered groups are 2- or 3- azetidiny, oxetanyl, thioxetanyl, thioxetanyl-s-oxide and thioxetanyl-s,s-dioxide. Examples of 5- membered heterocyclyl groups in this instance include dioxalanyl, pyrrolidiny, tetrahydrofuranyl, tetrahydrothiophenyl and tetrahydrothiophenyl-s,s-dioxide. Examples of 6-membered heterocyclyl groups are morpholinyl, piperidinyl, piperazinyl, tetrahydropyranyl, tetrahydrothiopyranyl, tetrahydrothiopyranyl-s,s-dioxide, thiomorpholinyl, thiomorpholinyl-s,s-dioxide, tetrahydropyridiny dioxanyl, and tetrahydro-thiopyran 1,1 dioxide. Examples of a 7- membered heterocyclyl ring are azapine or oxapine. Examples of 8- membered groups are azacyclooctanyl, azaoxacyclooctanyl or azathiacyclooctanyl, oxacyclooctanyl, or thiacyclooctanyl.

When  $R^3$  is an aromatic heterocyclyl group, the ring may contain 1, 2, 3, or 4 hetero atoms. In one particular embodiment the hetero atoms are selected from oxygen, nitrogen or sulphur. Examples of 5- membered heterocyclyl groups in this instance include furanyl, dioxalanyl, pyrrolyl, oxazolyl, thiazolyl, imidazolyl, oxadiazolyl, thiadiazolyl, triazolyl, triazinyl, isothiazolyl, isoxazolyl, thienyl, pyrazolyl or tetrazolyl. Examples of 6-membered heterocyclyl groups are pyridyl, pyrizinyl, pyrimidinyl, pyrazinyl, triazinyl, or tetrazinyl.

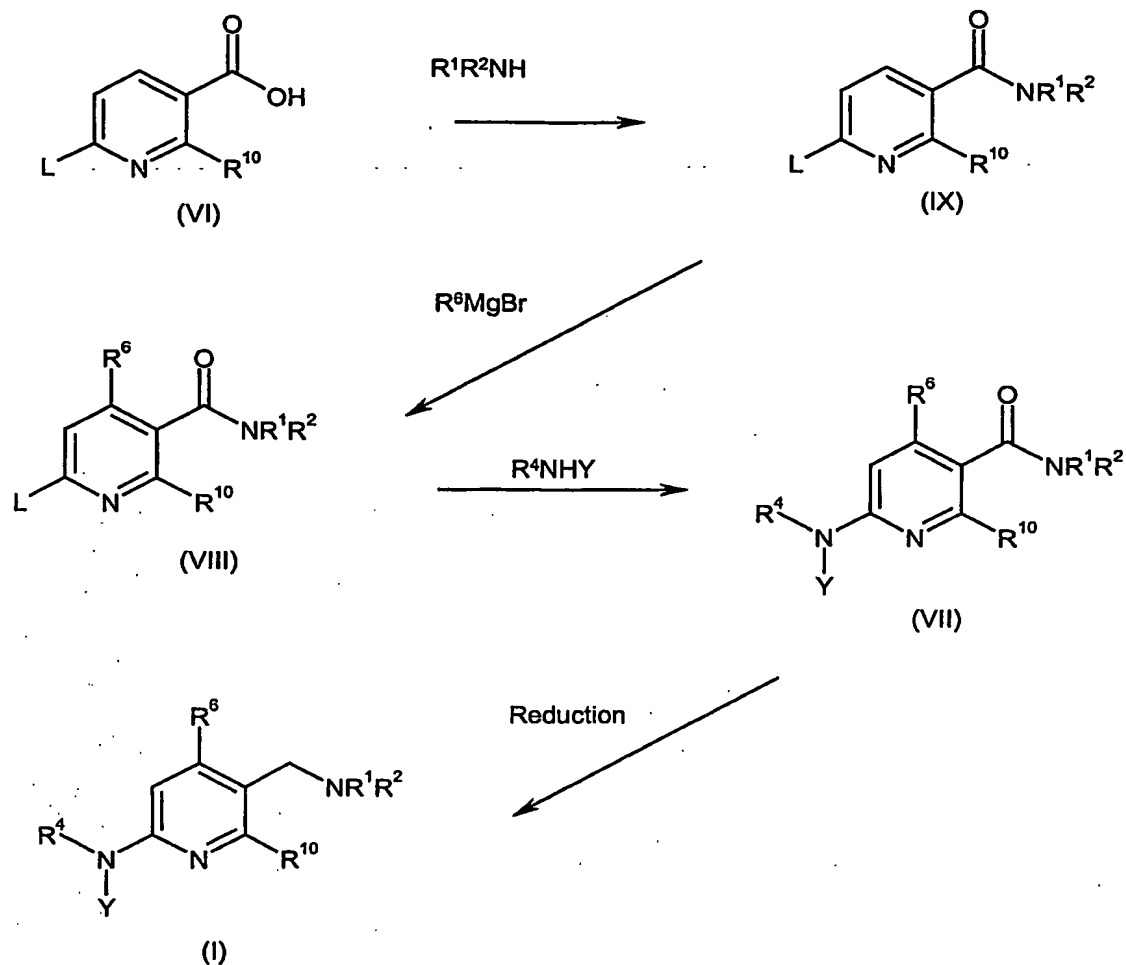

Compounds of formula (I) when  $R^{12}$  is hydrogen can be prepared as set forth in the following scheme:

wherein L is a leaving group, for example halo, and  $R^1$ ,  $R^2$ ,  $R^4$ ,  $R^6$ ,  $R^{10}$  and Y are as defined for compounds of formula (I).

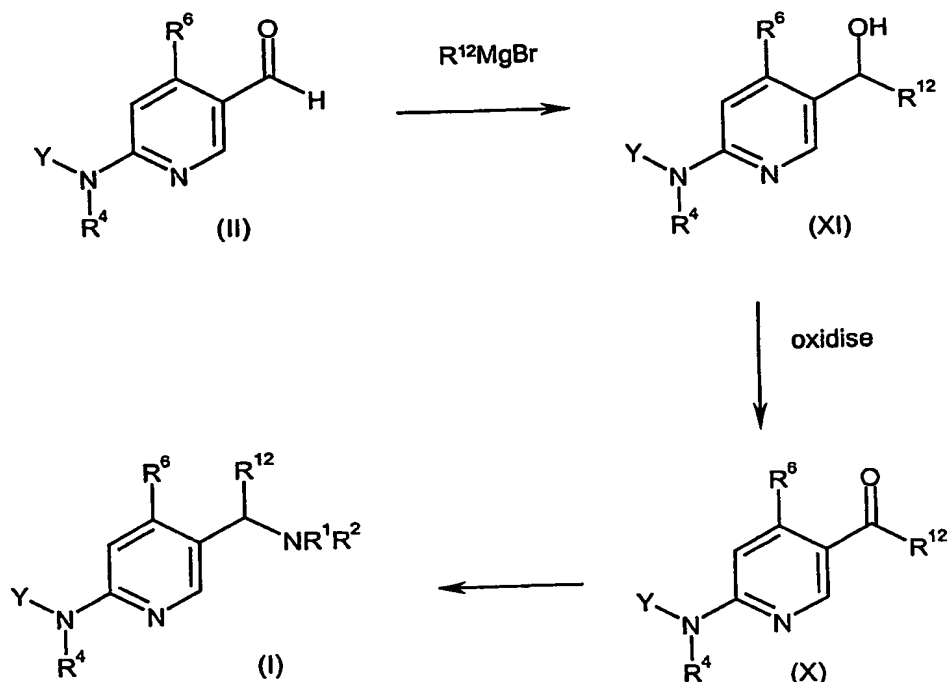

Compounds of formula (I) when  $R^{12}$  is hydrogen can be prepared as set forth in the following scheme 2:

Scheme 2

wherein  $L$  is a leaving group, for example halo, and  $R^1$ ,  $R^2$ ,  $R^4$ ,  $R^6$ ,  $R^{10}$  and  $Y$  are as defined for compounds of formula (I).

Compounds of formula (I) where  $R^{12}$  is other than hydrogen can be prepared by the following scheme 3 from compounds of formula (II) (prepared as set out in scheme 1):

wherein  $\text{R}^1$ ,  $\text{R}^2$ ,  $\text{R}^4$ ,  $\text{R}^6$ ,  $\text{R}^{12}$  and Y are as defined for compounds of formula (I) except  $\text{R}^{12}$  is not hydrogen.

It is to be understood that the present invention encompasses all isomers of compounds of formula (I) and their pharmaceutically acceptable derivatives, including all geometric, tautomeric and optical forms, and mixtures thereof (e.g. racemic mixtures). Where additional chiral centres are present in compounds of formula (I), the present invention includes within its scope all possible diastereoisomers, including mixtures thereof. The different isomeric forms may be separated or resolved one from the other by conventional methods, or any given isomer may be obtained by conventional synthetic methods or by stereospecific or asymmetric syntheses.

The subject invention also includes isotopically-labeled compounds, which are identical to those recited in formulas I and following, but for the fact that one or more atoms are replaced by an atom having an atomic mass or mass number different from the atomic mass or mass number usually found in nature. Examples of isotopes that can be incorporated into compounds of the invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine, iodine, and chlorine, such as  $^3\text{H}$ ,  $^{11}\text{C}$ ,  $^{14}\text{C}$ ,  $^{18}\text{F}$ ,  $^{123}\text{I}$  and  $^{125}\text{I}$ .

Compounds of the present invention and pharmaceutically acceptable salts of said compounds that contain the aforementioned isotopes and/or other isotopes of other atoms are within the scope of the present invention. Isotopically-labeled compounds of the present invention, for example those into which radioactive isotopes such as  $^3\text{H}$ ,  $^{14}\text{C}$  are incorporated, are useful in drug and/or substrate tissue distribution assays. Tritiated, i.e.,  $^3\text{H}$ , and carbon-14, i.e.,  $^{14}\text{C}$ , isotopes are particularly preferred for their ease of preparation and detectability.  $^{11}\text{C}$  and  $^{18}\text{F}$  isotopes are particularly useful in PET (positron emission tomography), and  $^{125}\text{I}$  isotopes are particularly useful in SPECT (single photon emission computerized tomography), all useful in brain imaging. Further,

substitution with heavier isotopes such as deuterium, i.e.,  $^2\text{H}$ , can afford certain therapeutic advantages resulting from greater metabolic stability, for example increased *in vivo* half-life or reduced dosage requirements and, hence, may be preferred in some circumstances. Isotopically labeled compounds of formula I and following of this invention can generally be prepared by carrying out the procedures disclosed in the Schemes and/or in the Examples below, by substituting a readily available isotopically labeled reagent for a non-isotopically labeled reagent.

The compounds of formula (I) may be prepared in crystalline or non-crystalline form, and, if crystalline, may optionally be hydrated or solvated. This invention includes within its scope stoichiometric hydrates or solvates as well as compounds containing variable amounts of water and/or solvent.

The compounds of the invention bind selectively to the CB2 receptor, and are therefore useful in treating CB2 receptor mediated diseases.

In view of their ability to bind to the CB2 receptor, the compounds of the invention may be useful in the treatment of the disorders that follow. Thus, the compounds of formula (I) may be useful as analgesics. For example they may be useful in the treatment of chronic inflammatory pain (e.g. pain associated with rheumatoid arthritis, osteoarthritis, rheumatoid spondylitis, gouty arthritis and juvenile arthritis) including the property of disease modification and joint structure preservation; musculoskeletal pain; lower back and neck pain; sprains and strains; neuropathic pain; sympathetically maintained pain; myositis; pain associated with cancer and fibromyalgia; pain associated with migraine; pain associated with influenza or other viral infections, such as the common cold; rheumatic fever; pain associated with functional bowel disorders such as non-ulcer dyspepsia, non-cardiac chest pain and irritable bowel syndrome; pain associated with myocardial ischemia; post operative pain; headache; toothache; and dysmenorrhea.

The compounds of the invention may also be useful disease modification or joint structure preservation in multiple sclerosis, rheumatoid arthritis, osteo-arthritis, rheumatoid spondylitis, gouty arthritis and juvenile arthritis.

The compounds of the invention may be particularly useful in the treatment of neuropathic pain. Neuropathic pain syndromes can develop following neuronal injury and the resulting pain may persist for months or years, even after the original injury has healed. Neuronal injury may occur in the peripheral nerves, dorsal roots, spinal cord or certain regions in the brain. Neuropathic pain syndromes are traditionally classified according to the disease or event that precipitated them. Neuropathic pain syndromes include: diabetic neuropathy; sciatica; non-specific lower back pain; multiple sclerosis pain; fibromyalgia; HIV-related neuropathy; post-herpetic neuralgia; trigeminal neuralgia; and pain resulting from physical trauma, amputation, cancer, toxins or chronic inflammatory conditions. These conditions are difficult to treat and although several drugs are known to have limited efficacy, complete pain control is rarely achieved. The symptoms of neuropathic pain are incredibly heterogeneous and are often described as spontaneous shooting and lancinating pain, or ongoing, burning pain. In addition, there is pain associated with normally non-painful sensations such as "pins and needles" (paraesthesias and dysesthesias), increased sensitivity to touch (hyperesthesia), painful sensation following innocuous stimulation (dynamic, static or thermal allodynia), increased sensitivity to noxious stimuli (thermal, cold, mechanical hyperalgesia), continuing pain sensation after removal of the stimulation (hyperpathia) or an absence of or deficit in selective sensory pathways (hypoalgesia).

The compounds of formula (I) may also be useful in the treatment of fever.

The compounds of formula (I) may also be useful in the treatment of inflammation, for example in the treatment of skin conditions (e.g. sunburn, burns, eczema, dermatitis, psoriasis); ophthalmic diseases such as glaucoma, retinitis, retinopathies, uveitis and of acute injury to the eye tissue (e.g. conjunctivitis); lung disorders (e.g. asthma, bronchitis, emphysema, allergic rhinitis, respiratory distress syndrome, pigeon fancier's disease, farmer's lung, chronic obstructive pulmonary disease, (COPD)); gastrointestinal tract disorders (e.g. aphthous ulcer, Crohn's disease, atopic gastritis, gastritis varioliforme, ulcerative colitis, coeliac disease, regional ileitis, irritable bowel syndrome, inflammatory bowel disease, gastroesophageal reflux disease); organ transplantation; other conditions with an inflammatory component such as vascular disease, migraine, periarteritis nodosa, thyroiditis, aplastic anaemia, Hodgkin's disease, sclerodoma, myaesthesia gravis, multiple sclerosis, sarcoidosis, nephrotic syndrome, Bechet's syndrome, polymyositis, gingivitis, myocardial ischemia, pyrexia, systemic lupus erythematosus, tendinitis, bursitis, and Sjogren's syndrome.

The compounds of formula (I) may also be useful in the treatment of bladder hyperreflexia following bladder inflammation.

The compounds of formula (I) may also be useful in the treatment of immunological diseases such as autoimmune diseases, immunological deficiency diseases or organ transplantation. The compounds of formula (I) may also be effective in increasing the latency of HIV infection.

The compounds of formula (I) may also be useful in the treatment of diseases of abnormal platelet function (e.g. occlusive vascular diseases).

The compounds of formula (I) may also be useful in the treatment of neuritis, heart burn, dysphagia, pelvic hypersensitivity, urinary incontinence, cystitis or pruritis.

The compounds of formula (I) may also be useful for the preparation of a drug with diuretic action.

The compounds of formula (I) may also be useful in the treatment of impotence or erectile dysfunction.

The compounds of formula (I) may also be useful for attenuating the hemodynamic side effects of non-steroidal anti-inflammatory drugs (NSAID's) and cyclooxygenase-2 (COX-2) inhibitors.

The compounds of formula (I) may also be useful in the treatment of neurodegenerative diseases and neurodegeneration such as dementia, particularly degenerative dementia (including senile dementia, Alzheimer's disease, Pick's disease, Huntingdon's chorea, Parkinson's disease and Creutzfeldt-Jakob disease, motor neuron disease); vascular dementia (including multi-infarct dementia); as well as dementia associated with intracranial space occupying lesions; trauma; infections and related conditions (including HIV infection); dementia in Parkinson's disease; metabolism; toxins; anoxia and vitamin deficiency; and mild cognitive impairment associated with ageing, particularly Age Associated Memory Impairment. The compounds may also be useful for the treatment of amyotrophic lateral sclerosis (ALS) and neuroinflammation.

The compounds of formula (I) may also be useful in neuroprotection and in the treatment of neurodegeneration following stroke, cardiac arrest, pulmonary bypass, traumatic brain injury, spinal cord injury or the like.

The compounds of formula (I) may also be useful in the treatment of tinnitus.

The compounds of formula (I) may also be useful in the treatment of psychiatric disease for example schizophrenia, depression (which term is used herein to include bipolar depression, unipolar depression, single or recurrent major depressive episodes with or without psychotic features, catatonic features, melancholic features, atypical features or postpartum onset, seasonal affective disorder, dysthymic disorders with early or late onset and with or without atypical features, neurotic depression and social phobia, depression accompanying dementia for example of the Alzheimer's type, schizoaffective disorder or the depressed type, and depressive disorders resulting from general medical conditions including, but not limited to, myocardial infarction, diabetes, miscarriage or abortion, *etc*), anxiety disorders (including generalised anxiety disorder and social anxiety disorder), panic disorder, agoraphobia, social phobia, obsessive compulsive disorder and post-traumatic stress disorder, memory disorders, including dementia, amnesic disorders and age-associated memory impairment, disorders of eating behaviours, including anorexia nervosa and bulimia nervosa, sexual dysfunction, sleep disorders (including disturbances of circadian rhythm, dyssomnia, insomnia, sleep apnea and narcolepsy), withdrawal from abuse of drugs such as of cocaine, ethanol, nicotine, benzodiazepines, alcohol, caffeine, phencyclidine (phencyclidine-like compounds), opiates (e.g. cannabis, heroin, morphine), amphetamine or amphetamine-related drugs (e.g. dextroamphetamine, methylamphetamine) or a combination thereof.

The compounds of formula (I) may also be useful in preventing or reducing dependence on, or preventing or reducing tolerance or reverse tolerance to, a dependence - inducing agent. Examples of dependence inducing agents include opioids (e.g. morphine), CNS depressants (e.g. ethanol), psychostimulants (e.g. cocaine) and nicotine.

The compounds of formula (I) may also be useful in the treatment of kidney dysfunction (nephritis, particularly mesangial proliferative glomerulonephritis, nephritic syndrome), liver dysfunction (hepatitis, cirrhosis), gastrointestinal dysfunction (diarrhoea) and colon cancer.

The term "treatment" or "treating" as used herein includes the treatment of established disorders and also includes the prophylaxis thereof. The term "prophylaxis" is used herein to mean preventing symptoms in an already afflicted subject or preventing recurrence of symptoms in an afflicted subject and is not limited to complete prevention of an affliction.

According to a further aspect of the invention, we provide a compound of formula (I) or a pharmaceutically acceptable derivative thereof for use in human or veterinary medicine.

According to another aspect of the invention, we provide a compound of formula (I) or a pharmaceutically acceptable derivative thereof for use in the treatment of a condition which is mediated by the activity of cannabinoid 2 receptors.

According to a further aspect of the invention, we provide a method of treating a human or animal subject suffering from a condition which is mediated by the activity of cannabinoid 2 receptors which comprises administering to said subject a therapeutically effective amount of a compound of formula (I) or a pharmaceutically acceptable derivative thereof.

According to a further aspect of the invention we provide a method of treating a human or animal subject suffering from an immune disorder, an inflammatory disorder, pain, rheumatoid arthritis, multiple sclerosis, osteoarthritis or osteoporosis which method comprises administering to said subject an effective amount of a compound of formula (I) or a pharmaceutically acceptable derivative thereof.

In one embodiment the pain is selected from inflammatory pain, visceral pain, cancer pain, neuropathic pain, lower back pain, muscular skeletal, post operative pain, acute pain and migraine. For example, the inflammatory pain is pain associated with rheumatoid arthritis or osteoarthritis.

According to another aspect of the invention is provided the use of a compound of formula (I) or a pharmaceutically acceptable derivative thereof for the manufacture of a therapeutic agent for the treatment or prevention of a condition such as an immune disorder, an inflammatory disorder, pain, rheumatoid arthritis, multiple sclerosis, osteoarthritis or osteoporosis.

In order to use a compound of formula (I) or a pharmaceutically acceptable derivative thereof for the treatment of humans and other mammals it is normally formulated in accordance with standard pharmaceutical practice as a pharmaceutical composition. Therefore in another aspect of the invention is provided a pharmaceutical composition comprising a compound of formula (I) or a pharmaceutically acceptable derivative thereof adapted for use in human or veterinary medicine.

As used herein, "modulator" means both antagonist, partial or full agonist and inverse agonist. In one embodiment the present modulators are agonists.

Compounds of formula (I) and their pharmaceutically acceptable derivatives may be administered in a standard manner for the treatment of the indicated diseases, for example orally, parenterally, sub-lingually, dermally, intranasally, transdermally, rectally, via inhalation or via buccal administration.

Compounds of formula (I) and their pharmaceutically acceptable derivatives which are active when given orally can be formulated as liquids, tablets, capsules and lozenges. A liquid formulation will generally consist of a suspension or solution of the compound or salt in a liquid carrier for example, ethanol, olive oil, glycerine, glucose (syrup) or water with a flavouring, suspending, or colouring agent. Where the composition is in the form of a tablet, any pharmaceutical carrier routinely used for preparing solid formulations may be used. Examples of such carriers include magnesium stearate, terra alba, talc, gelatin, acacia, stearic acid, starch, lactose and sucrose. Where the composition is in the form of a capsule, any routine encapsulation is suitable, for example using the aforementioned carriers or a semi solid e.g. mono di-glycerides of capric acid, Gelucire™ and Labrasol™, or a hard capsule shell e.g. gelatin. Where the composition is in the form of a soft shell capsule e.g. gelatin, any pharmaceutical carrier routinely used for preparing dispersions or suspensions may be considered, for example aqueous gums or oils, and are incorporated in a soft capsule shell.

Typical parenteral compositions consist of a solution or suspension of a compound or derivative in a sterile aqueous or non-aqueous carrier optionally containing a parenterally acceptable oil, for example polyethylene glycol, polyvinylpyrrolidone, lecithin, arachis oil or sesame oil.

Typical compositions for inhalation are in the form of a solution, suspension or emulsion that may be administered as a dry powder or in the form of an aerosol using a conventional propellant such as dichlorodifluoromethane or trichlorofluoromethane.

A typical suppository formulation comprises a compound of formula (I) or a pharmaceutically acceptable derivative thereof which is active when administered in this way, with

a binding and/or lubricating agent, for example polymeric glycols, gelatins, cocoa-butter or other low melting vegetable waxes or fats or their synthetic analogs.

Typical dermal and transdermal formulations comprise a conventional aqueous or non-aqueous vehicle, for example a cream, ointment, lotion or paste or are in the form of a medicated plaster, patch or membrane.

In one embodiment the composition is in unit dosage form, for example a tablet, capsule or metered aerosol dose, so that the patient may administer a single dose.

Each dosage unit for oral administration contains suitably from 0.01 mg to 500 mg/Kg, and for example from 0.01 mg to 100 mg/Kg, and each dosage unit for parenteral administration contains suitably from 0.001 mg to 100 mg/Kg, of a compound of formula(I) or a pharmaceutically acceptable derivative thereof calculated as the free acid. Each dosage unit for intranasal administration contains suitably 1-400 mg and suitably 10 to 200 mg per person. A topical formulation contains suitably 0.01 to 5.0% of a compound of formula (I).

The daily dosage regimen for oral administration is suitably about 0.01 mg/Kg to 1000 mg/Kg, of a compound of formula(I) or a pharmaceutically acceptable derivative thereof calculated as the free acid. The daily dosage regimen for parenteral administration is suitably about 0.001 mg/Kg to 200 mg/Kg, of a compound of formula (I) or a pharmaceutically acceptable derivative thereof calculated as the free acid. The daily dosage regimen for intranasal administration and oral inhalation is suitably about 10 to about 500 mg/person. The active ingredient may be administered from 1 to 6 times a day, sufficient to exhibit the desired activity.

It may be advantageous to prepare the compounds of the present invention as nanoparticles. This may improve the oral bioavailability of the compounds. For the purposes of the present invention "nanoparticulate" is defined as solid particles with 50% of the particles having a particle size of less than 1 $\mu$ m, for example less than 0.75 $\mu$ m

The particle size of the solid particles of compound (I) may be determined by laser diffraction. A suitable machine for determining particle size by laser diffraction is a Lecotrac laser particle size analyser, using an HELOS optical bench fitted with a QUIXEL dispersion unit.

Numerous processes for the synthesis of solid particles in nanoparticulate form are known. Typically these processes involve a milling process, for example a wet milling process in the presence of a surface modifying agent that inhibits aggregation and/or crystal growth of the nanoparticles once created. Alternatively these processes may involve a precipitation process, for example, a process of precipitation in an aqueous medium from a solution of the drug in a non-aqueous solvent.

Accordingly, in a further aspect, the present invention provides a process for preparing compound (I) in nanoparticulate form as hereinbefore defined, which process comprises milling or precipitation.

Representative processes for the preparation of solid particles in nanoparticulate form are described in the patents and publications listed below.

U.S. Patent No. 4,826,689 to Violanto & Fischer, U. S. Patent No. 5,145,684 to Liversidge et al  
U.S Patent No. 5,298,262 to Na & Rajagopalan, U.S. Patent No. 5,302,401 Liversidge et al  
U.S. Patent No. 5,336,507 to Na & Rajagopalan, U.S. Patent No. 5,340,564 to Illig & Sarpotdar  
U.S. Patent No. 5,346,702 to Na Rajagopalan, U.S. Patent No. 5,352,459 to Hollister et al

U.S. Patent No. 5,354,560 to Lovrecich, U.S. Patent No. 5,384,124 to Courteille et al, U.S. Patent No. 5,429,824 to June, U.S. Patent No. 5,503,723 to Ruddy et al, U.S. Patent No. 5,510 118 to Bosch et al, U.S. Patent No. 5,518 to Bruno et al, U.S. Patent No. 5,518,738 to Eickhoff et al, U.S. Patent No. 5,534,270 to De Castro, U.S. Patent No. 5,536,508 to Canal et al, U.S. Patent No. 5,552,160 to Liversidge et al, U.S. Patent No. 5,560,931 to Eickhoff et al, U.S. Patent No. 5,560,932 to Bagchi et al, U.S. Patent No. 5,565,188 to Wong et al, U.S. Patent No. 5,571,536 to Eickhoff et al, U.S. Patent No. 5,573,783 to Desieno & Stetsko, U.S. Patent No. 5,580,579 to Ruddy et al, U.S. Patent No. 5,585,108 to Ruddy et al, U.S. Patent No. 5,587,143 to Wong, U.S. Patent No. 5,591,456 to Franson et al, U.S. Patent No. 5,622,938 to Wong, U.S. Patent No. 5,662,883 to Bagchi et al, U.S. Patent No. 5,665,331 to Bagchi et al, U.S. Patent No. 5,718,919 to Ruddy et al, U.S. Patent No. 5,747,001 to Wiedmann et al, WO93/25190, WO96/24336, WO 97/14407, WO 98/35666, WO 99/65469, WO 00/18374, WO 00/27369, WO 00/30615 and WO 01/41760.

Such processes may be readily adapted for the preparation of compound (I) in nanoparticulate form. Such processes form a further aspect of the invention.

The process of the present invention may use a wet milling step carried out in a mill such as a dispersion mill in order to produce a nanoparticulate form of the compound. The present invention may be put into practice using a conventional wet milling technique, such as that described in Lachman *et al.*, The Theory and Practice of Industrial Pharmacy, Chapter 2, "Milling" p.45 (1986).

In a further refinement, WO02/00196 (SmithKline Beecham plc) describes a wet milling procedure using a mill in which at least some of the surfaces are made of nylon (polyamide) comprising one or more internal lubricants, for use in the preparation of solid particles of a drug substance in nanoparticulate form.

In another aspect the present invention provides a process for preparing compounds of the invention in nanoparticulate form comprising wet milling a suspension of compound in a mill having at least one chamber and agitation means, said chamber(s) and/or said agitation means comprising a lubricated nylon, as described in WO02/00196.

The suspension of a compound of the invention for use in the wet milling is typically a liquid suspension of the coarse compound in a liquid medium. By "suspension" is meant that the compound is essentially insoluble in the liquid medium. Representative liquid media include an aqueous medium. Using the process of the present invention the average particle size of coarse compound of the invention may be up to 1mm in diameter. This advantageously avoids the need to pre-process the compound.

In a further aspect of the invention the aqueous medium to be subjected to the milling comprises compound (I) present in from about 1% to about 40% w/w, suitably from about 10% to about 30% w/w, for example about 20% w/w.

The aqueous medium may further comprise one or more pharmaceutically acceptable water-soluble carriers which are suitable for steric stabilisation and the subsequent processing of compound (I) after milling to a pharmaceutical composition, e.g. by spray drying. Pharmaceutically acceptable excipients most suitable for steric stabilisation and spray-drying are surfactants such as poloxamers, sodium lauryl sulphate and polysorbates etc; stabilisers such as celluloses e.g. hydroxypropylmethyl cellulose; and carriers such as carbohydrates e.g. mannitol.

In a further aspect of the invention the aqueous medium to be subjected to the milling may further comprise hydroxypropylmethyl cellulose (HPMC) present from about 0.1 to about 10% w/w.

The process of the present invention may comprise the subsequent step of drying compound of the invention to yield a powder.

Accordingly, in a further aspect, the present invention provides a process for preparing a pharmaceutical composition contain a compound of the present invention which process comprises producing compound of formula (I) in nanoparticulate form optionally followed by drying to yield a powder.

A further aspect of the invention is a pharmaceutical composition comprising a compound of formula (I) or a pharmaceutically acceptable derivate thereof in which the compound of formula (I) or a pharmaceutically acceptable derivate thereof is present in solid particles in nanoparticulate form, in admixture with one or more pharmaceutically acceptable carriers or excipients.

By "drying" is meant the removal of any water or other liquid vehicle used during the process to keep compound of formula (I) in liquid suspension or solution. This drying step may be any process for drying known in the art, including freeze drying, spray granulation or spray drying. Of these methods spray drying is particularly preferred. All of these techniques are well known in the art. Spray drying/fluid bed granulation of milled compositions is carried out most suitably using a spray dryer such as a Mobile Minor Spray Dryer [Niro, Denmark], or a fluid bed drier, such as those manufactured by Glatt, Germany.

In a further aspect the invention provides a pharmaceutical composition as hereinbefore defined, in the form of a dried powder, obtainable by wet milling solid particles of compound of formula (I) followed by spray-drying the resultant suspension.

In one embodiment, the pharmaceutical composition as hereinbefore defined, further comprises HPMC present in less than 15% w/w, for example, in the range 0.1 to 10% w/w.

The CB<sub>2</sub> receptor compounds for use in the instant invention may be used in combination with other therapeutic agents, for example COX-2 inhibitors, such as celecoxib, deracoxib, rofecoxib, valdecoxib, parecoxib or COX-189; 5-lipoxygenase inhibitors; NSAID's, such as aspirin, diclofenac, indomethacin, nabumetone or ibuprofen; leukotriene receptor antagonists; DMARD's such as methotrexate; adenosine A1 receptor agonists; sodium channel blockers, such as lamotrigine; NMDA receptor modulators, such as glycine receptor antagonists; gabapentin and related compounds; tricyclic antidepressants such as amitriptyline; neurone stabilising antiepileptic drugs; mono-aminergic uptake inhibitors such as venlafaxine; opioid analgesics; local anaesthetics; 5HT<sub>1</sub> agonists, such as triptans, for example sumatriptan, naratriptan, zolmitriptan, eletriptan, frovatriptan, almotriptan or rizatriptan; EP<sub>1</sub> receptor ligands, EP<sub>4</sub> receptor ligands; EP<sub>2</sub> receptor ligands; EP<sub>3</sub> receptor ligands; EP<sub>4</sub> antagonists; EP<sub>2</sub> antagonists and EP<sub>3</sub> antagonists; bradykinin receptor ligands and vanilloid receptor ligand, antirheumatoid arthritis drugs, for example anti TNF drugs e.g. enbrel, remicade, anti-IL-1 drugs, or DMARDS e.g. leflunamide. When the compounds are used in combination with other therapeutic agents, the compounds may be administered either sequentially or simultaneously by any convenient route.

Additional COX-2 inhibitors are disclosed in US Patent Nos. 5,474,995 US5,633,272; US5,466,823, US6,310,099 and US6,291,523; and in WO 96/25405, WO 97/38986, WO 98/03484, WO 97/14691, WO99/12930, WO00/26216, WO00/52008, WO00/38311, WO01/58881 and WO02/18374.

PB60755P

The compound of the present invention may be administered in combination with other active substances such as 5HT<sub>3</sub> antagonists, NK-1 antagonists, serotonin agonists, selective serotonin reuptake inhibitors (SSRI), noradrenaline re-uptake inhibitors (SNRI), tricyclic antidepressants and/or dopaminergic antidepressants.

Suitable 5HT<sub>3</sub> antagonists which may be used in combination of the compound of the invention include for example ondansetron, granisetron, metoclopramide.

Suitable serotonin agonists which may be used in combination with the compound of the invention include sumatriptan, rauwolscine, yohimbine, metoclopramide.

Suitable SSRIs which may be used in combination with the compound of the invention include fluoxetine, citalopram, femoxetine, fluvoxamine, paroxetine, indalpine, sertraline, zimeldine.

Suitable SNRIs which may be used in combination with the compound of the invention include venlafaxine and reboxetine.

Suitable tricyclic antidepressants which may be used in combination with a compound of the invention include imipramine, amitriptyline, chlomipramine and nortriptyline.

Suitable dopaminergic antidepressants which may be used in combination with a compound of the invention include bupropion and amineptine.

Compounds of the present invention may be used in combination with PDE4 inhibitors. The PDE4 inhibitor useful in this invention may be any compound that is known to inhibit the PDE4 enzyme or which is discovered to act in as PDE4 inhibitor, and which is only or essentially only a PDE4 inhibitor, not compounds which inhibit to a degree of exhibiting a therapeutic effect other members of the PDE family as well as PDE4. Generally it is preferred to use a PDE4 antagonists which has an IC<sub>50</sub> ratio of about 0.1 or greater as regards the IC<sub>50</sub> for the PDE4 catalytic form which binds rolipram with a high affinity divided by the IC<sub>50</sub> for the form which binds rolipram with a low affinity. Compounds of the present invention or combinations with PDE4 can be used in treating inflammation and as bronchodilators.

It turns out that there are at least two binding forms on human monocyte recombinant PDE 4 (hPDE 4) at which inhibitors bind. One explanation for these observations is that hPDE 4 exists in two distinct forms. One binds the likes of rolipram and denbufylline with a high affinity while the other binds these compounds with a low affinity. The preferred PDE4 inhibitors of for use in this invention will be those compounds which have a salutary therapeutic ratio, i.e., compounds which preferentially inhibit cAMP catalytic activity where the enzyme is in the form that binds rolipram with a low affinity, thereby reducing the side effects which apparently are linked to inhibiting the form which binds rolipram with a high affinity. Another way to state this is that the preferred compounds will have an IC<sub>50</sub> ratio of about 0.1 or greater as regards the IC<sub>50</sub> for the PDE 4 catalytic form which binds rolipram with a high affinity divided by the IC<sub>50</sub> for the form which binds rolipram with a low affinity.

Reference is made to U.S. patent 5,998,428, which describes these methods in more detail. It is incorporated herein in full as though set forth herein.

Suitably are those PDE4 inhibitors which have an IC<sub>50</sub> ratio of greater than 0.5, and particularly those compounds having a ratio of greater than 1.0.

A further aspect of the invention is an CB2 modulator in combination with a PDE4 inhibitor and pharmaceutical compositions comprising said combination.

A further aspect of the invention is a method of treating lung disorders for example asthma, bronchitis, emphysema, allergic rhinitis, respiratory distress syndrome, pigeon fancier's disease, farmer's lung, chronic obstructive pulmonary disease, (COPD) and cough or a disorder which can be treated with a broncodilator which comprises administering to a mammal including man, an effective amount of a CB modulator or a pharmaceutically acceptable derivative thereof and an effective amount of a PDE4 inhibitor or a pharmaceutically acceptable derivative thereof.

An additional aspect of the invention is the use of an effective amount of a CB2 modulator or a pharmaceutically acceptable derivative thereof and an effective amount of a PDE4 inhibitor or a pharmaceutically acceptable derivative thereof in the manufacture of a medicament in the treatment of lung disorders for example asthma, bronchitis, emphysema, allergic rhinitis, respiratory distress syndrome, pigeon fancier's disease, farmer's lung, chronic obstructive pulmonary disease, (COPD) and cough or for the manufacture of a broncodilator.

When used herein cough can have a number of forms and includes productive, non-productive, hyper-reactive, asthma and COPD associated.

A further aspect of the invention is a patient pack comprising an effective amount of a CB 2 modulator or a pharmaceutically acceptable derivative thereof and an effective amount of a PDE4 inhibitor or a pharmaceutically acceptable derivative

Possible PDE4 compounds are *cis* [cyano-4-(3-cyclopentyloxy-4-methoxyphenyl)cyclohexan-1-carboxylate] also known as cilomilast or Ariflo<sup>®</sup>, 2-carbomethoxy-4-cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-one, and *cis* [4-cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-ol]. They can be made by the process described in US patents 5,449,686 and 5,552,438. Other PDE4 inhibitors, specific inhibitors, which can be used in this invention are AWD-12-281 from ASTA MEDICA (Hofgen, N. *et al.* 15th EFMC Int Symp Med Chem (Sept 6-10, Edinburgh) 1998, Abst P.98); a 9-benzyladenine derivative nominated NCS-613 (INSERM); D-4418 from Chiroscience and Schering-Plough; a benzodiazepine PDE4 inhibitor identified as CI-1018 (PD-168787; Parke-Davis/Warner-Lambert); a benzodioxole derivative Kyowa Hakko disclosed in WO 9916766; V-11294A from Napp (Landells, L.J. *et al.* Eur Resp J [Annu Cong Eur Resp Soc (Sept 19-23, Geneva) 1998] 1998, 12(Suppl. 28): Abst P2393); roflumilast (CAS reference No 162401-32-3) and a pthalazinone (WO 99/47505) from Byk-Gulden (now Altana); or a compound identified as T-440 (Tanabe Seiyaku; Fuji, K. *et al.* *J Pharmacol Exp Ther*, 1998, 284(1): 162).

Additional PDE4 inhibitors are disclosed on pages 2 to 15 of WO01/13953. Specifically selected are arofylline, atizoram, BAY-19-8004, benafentrine, BYK-33043, CC-3052, CDP-840, cipamfylline, CP-220629, CP-293121, D-22888, D-4396, denbufylline, filaminast, GW-3600, ibudilast, KF-17625, KS-506-G, laprafylline, NA-0226A, NA-23063A, ORG-20241, ORG-30029, PDB-093, pentoxifylline, piclamilast, rolipram, RPR-117658, RPR-122818, RPR-132294, RPR-132703, RS-17597, RS-25344-000, SB-207499, SB210667, SB211572, SB-211600, SB212066, SB212179, SDZ-ISQ-844, SDZ-MNS-949, SKF-107806, SQ-20006, T-2585, tibenelast, tolafentrine, UCB-29646, V-11294A, YM-58997, YM-976 and zardaverine. In one embodiment the PDE4 inhibitor is selected from cilomilast, AWD-12-281, NCS-613, D-4418, CI-1018, V-11294A, roflumilast or T-440.

PB60755P

It will be appreciated that the compounds of any of the above combinations or compositions may be administered simultaneously (either in the same or different pharmaceutical formulations), separately or sequentially.

The invention thus provides, in a further aspect, a combination comprising a compound of formula (I) or a pharmaceutically acceptable derivative thereof together with a further therapeutic agent or agents.

The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical formulation and thus pharmaceutical formulations comprising a combination as defined above together with a pharmaceutically acceptable carrier or excipient comprise a further aspect of the invention. The individual components of such combinations may be administered either sequentially or simultaneously in separate or combined pharmaceutical formulations. When a compound of formula (I) or a pharmaceutically acceptable derivative thereof is used in combination with a second therapeutic agent active against the same disease state the dose of each compound may differ from that when the compound is used alone. Appropriate doses will be readily appreciated by those skilled in the art.

#### **Determination of cannabinoid CB1 Receptor Agonist Activity**

The cannabinoid CB1 receptor agonist activity of the compounds of formula (I) was determined in accordance with the following experimental method.

#### **Experimental Method**

Yeast (*Saccharomyces cerevisiae*) cells expressing the human cannabinoid CB1 receptor were generated by integration of an expression cassette into the *ura3* chromosomal locus of yeast strain MMY23. This cassette consisted of DNA sequence encoding the human CB1 receptor flanked by the yeast GPD promoter to the 5' end of CB1 and a yeast transcriptional terminator sequence to the 3' end of CB1. MMY23 expresses a yeast/mammalian chimeric G-protein alpha subunit in which the C-terminal 5 amino acids of Gpa1 are replaced with the C-terminal 5 amino acids of human G $\alpha$ i3 (as described in Brown *et al.* (2000), *Yeast* 16:11-22). Cells were grown at 30°C in liquid Synthetic Complete (SC) yeast media (Guthrie and Fink (1991), *Methods in Enzymology*, Vol. 194) lacking uracil, tryptophan, adenine and leucine to late logarithmic phase (approximately 6 OD<sub>600</sub>/ml).

Agonists were prepared as 10 mM stocks in DMSO. EC<sub>50</sub> values (the concentration required to produce 50% maximal response) were estimated using dilutions of between 3- and 5-fold (BiomekFX, Beckman) into DMSO. Agonist solutions in DMSO (1% final assay volume) were transferred into black, clear bottom, microtitre plates from NUNC (96- or 384-well). Cells were suspended at a density of 0.2 OD<sub>600</sub>/ml in SC media lacking histidine, uracil, tryptophan, adenine and leucine and supplemented with 10mM 3-aminotriazole, 0.1M sodium phosphate pH 7.0, and 20μM fluorescein di-β-D-glucopyranoside (FDGlu). This mixture (50ul per well for 384-well plates, 200ul per well for 96-well plates) was added to agonist in the assay plates (Multidrop 384, Labsystems). After incubation at 30°C for 24 hours, fluorescence resulting from degradation of FDGlu to fluorescein due to exoglucanase, an endogenous yeast enzyme produced during agonist-stimulated cell growth, was determined using a Spectrofluor microtitre plate reader (Tecan; excitation wavelength: 485nm; emission wavelength: 535nm). Fluorescence was plotted against

compound concentration and iteratively curve fitted using a four parameter fit to generate a concentration effect value. Efficacy ( $E_{\max}$ ) was calculated from the equation

$$E_{\max} = \frac{\text{Max}_{[\text{compound X}]} - \text{Min}_{[\text{compound X}]} / \text{Max}_{[\text{HU210}]} - \text{Min}_{[\text{HU210}]} \times 100\%}{}$$

where  $\text{Max}_{[\text{compound X}]}$  and  $\text{Min}_{[\text{compound X}]}$  are the fitted maximum and minimum respectively from the concentration effect curve for compound X, and  $\text{Max}_{[\text{HU210}]}$  and  $\text{Min}_{[\text{HU210}]}$  are the fitted maximum and minimum respectively from the concentration effect curve for (6aR,10aR)-3-(1,1'-Dimethylheptyl)-6a,7,10,10a-tetrahydro-1-hydroxy-6,6-dimethyl-6H-dibenzo[b,d]pyran-9-methanol (HU210; available from Tocris). Equieffective molar ratio (EMR) values were calculated from the equation

$$\text{EMR} = \text{EC}_{50} [\text{compound X}] / \text{EC}_{50} [\text{HU210}]$$

Where  $\text{EC}_{50} [\text{compound X}]$  is the  $\text{EC}_{50}$  of compound X and  $\text{EC}_{50} [\text{HU210}]$  is the  $\text{EC}_{50}$  of HU210.

Compounds of the Examples tested according to this method had  $\text{EC}_{50}$  values  $>1,000\text{nM}$  and/or an efficacy of  $<30\%$  at the cloned human cannabinoid CB1 receptor.

#### Determination of cannabinoid CB2 Receptor Agonist Activity

The cannabinoid CB2 receptor agonist activity of the compounds of formula (I) was determined in accordance with the following experimental method.

#### Experimental Method

Yeast (*Saccharomyces cerevisiae*) cells expressing the human cannabinoid CB2 receptor were generated by integration of an expression cassette into the *ura3* chromosomal locus of yeast strain MMY23. This cassette consisted of DNA sequence encoding the human CB2 receptor flanked by the yeast GPD promoter to the 5' end of CB2 and a yeast transcriptional terminator sequence to the 3' end of CB2. MMY23 expresses a yeast/mammalian chimeric G-protein alpha subunit in which the C-terminal 5 amino acids of Gpa1 are replaced with the C-terminal 5 amino acids of human Gai3 (as described in Brown *et al.* (2000), *Yeast* 16:11-22). Cells were grown at 30°C in liquid Synthetic Complete (SC) yeast media (Guthrie and Fink (1991), *Methods in Enzymology*, Vol. 194) lacking uracil, tryptophan, adenine and leucine to late logarithmic phase (approximately 6 OD<sub>600</sub>/ml).

Agonists were prepared as 10 mM stocks in DMSO.  $\text{EC}_{50}$  values (the concentration required to produce 50% maximal response) were estimated using dilutions of between 3- and 5-fold (BiomekFX, Beckman) into DMSO. Agonist solutions in DMSO (1% final assay volume) were transferred into black, clear bottom, microtitre plates from NUNC (96- or 384-well). Cells were suspended at a density of 0.2 OD<sub>600</sub>/ml in SC media lacking histidine, uracil, tryptophan, adenine and leucine and supplemented with 10mM 3-aminotriazole, 0.1M sodium phosphate pH 7.0, and 20M fluorescein di-β-D-glucopyranoside (FDGlu). This mixture (50ul per well for 384-well plates, 200ul per well for 96-well plates) was added to agonist in the assay plates (Multidrop 384, Labsystems). After incubation at 30°C for 24 hours, fluorescence resulting from degradation of FDGlu to fluorescein due to exoglucanase, an endogenous yeast enzyme produced during agonist-stimulated cell growth, was determined using a Spectrofluor microtitre plate reader (Tecan; excitation wavelength: 485nm; emission wavelength: 535nm). Fluorescence was plotted against

PB60755P

compound concentration and iteratively curve fitted using a four parameter fit to generate a concentration effect value. Efficacy ( $E_{max}$ ) was calculated from the equation

$$E_{max} = \frac{\text{Max}_{[\text{compound X}]} - \text{Min}_{[\text{compound X}]} / \text{Max}_{[\text{HU210}]} - \text{Min}_{[\text{HU210}]} \times 100\%}{}$$

where  $\text{Max}_{[\text{compound X}]}$  and  $\text{Min}_{[\text{compound X}]}$  are the fitted maximum and minimum respectively from the concentration effect curve for compound X, and  $\text{Max}_{[\text{HU210}]}$  and  $\text{Min}_{[\text{HU210}]}$  are the fitted maximum and minimum respectively from the concentration effect curve for (6aR,10aR)-3-(1,1'-Dimethylheptyl)-6a,7,10,10a-tetrahydro-1-hydroxy-6,6-dimethyl-6H-dibenzo[b,d]pyran-9-methanol (HU210; available from Tocris). Equieffective molar ratio (EMR) values were calculated from the equation

$$\text{EMR} = \text{EC}_{50} [\text{compound X}] / \text{EC}_{50} [\text{HU210}]$$

Where  $\text{EC}_{50} [\text{compound X}]$  is the  $\text{EC}_{50}$  of compound X and  $\text{EC}_{50} [\text{HU210}]$  is the  $\text{EC}_{50}$  of HU210.

The compounds of Examples 1 to 5, 13-23, 32, 44, 46-52 tested according to this method had an  $\text{EC}_{50}$  values of <300nM and efficacy value of >50% at the cloned human cannabinoid CB2 receptor.

The compound of Example 11, 12, 24-31, 33, 34, 37, and 54 tested according to this method had an  $\text{EC}_{50}$  values between 300nM and 1000nM and efficacy value of >50% at the cloned human cannabinoid CB2 receptor.

The compounds of Examples 6 to 10, 35, 36, 38 to 43, 45 and 53 tested according to this method had an  $\text{EC}_{50}$  values >1000nM and/or efficacy value <50% at the cloned human cannabinoid CB2 receptor.

The following examples are illustrative, but not limiting of the embodiments of the present invention.

#### Abbreviations:

AcOH (acetic acid), Bn (benzyl), Bu, Pr, Me, Et (butyl, propyl, methyl ethyl), DMSO (dimethyl sulfoxide), DCM (dichloromethane), DME (1,2-dimethoxyethane), DMF (N,N-dimethylformamide), EDC (1-(3-dimethylaminopropyl)-3-ethylcarbodiimide), EtOAc (ethyl acetate), EtOH (ethanol), HPLC (High pressure liquid chromatography), LC/MS (Liquid chromatography/Mass spectroscopy), MDAP (Mass Directed AutoPurification), MeCN (acetonitril), MeOH (methanol), NMR (Nuclear Magnetic Resonance (spectrum)), NMP (n-methyl pyrrolidone), SPE (Solid Phase Extraction), THF (tetrahydrofuran), s, d, t, q, m, br (singlet, doublet, triplet, quartet, multiplet, broad.)

#### Conditions, Hardware, and Software used for Mass-directed Autopurification

##### Hardware

Waters 600 gradient pump, Waters 2700 sample manager, Waters Reagent Manager, Micromass ZMD mass spectrometer, Gilson 202 - fraction collector, Gilson Aspec - waste collector,

##### Software

Micromass Masslynx version 3.5

##### Column

The column used is typically a Supelco ABZ+ column whose dimensions are 10mm internal diameter by 100mm in length. The stationary phase particle size is 5 $\mu$ m.

**Solvents**

A. Aqueous solvent = Water + 0.1% Formic Acid

B. Organic solvent = MeCN: Water 95:5 +0.05% Formic Acid

Make up solvent = MeOH: Water 80:20 +50mMol Ammonium Acetate

Needle rinse solvent = MeOH: Water: DMSO 80:10:10

**Methods**

Five methods are used depending on the analytical retention time of the compound of interest.

They all have a flow rate of 20ml/min and a 15-minute runtime, which comprises of a 10-minute gradient followed by a 5-minute column flush and re-equilibration step.

Method 1 MDP 1.5-2.2 = 0-30%B

Method 2 MDP 2.0-2.8 = 5-30% B

Method 3 MDP 2.5-3.0 = 15-55%B

Method 4 MDP 2.8-4.0 = 30-80% B

Method 5 MDP 3.8-5.5 = 50-90% B

**Conditions used for Analytical LCMS Systems**

**Hardware**

Agilent 1100 gradient pump

Agilent 1100 Autosampler

Agilent 1100 PDA Dectector

Agilent 1100 Degasser

Micromass ZQ mass spectrometer

PL-ELS 1000

**Software**

Micromass Masslynx versions 3.5/4.0

**Column**

The column used is a Supelcosil ABZ+PLUS, the dimensions of which are 4.6mm x 33mm. The stationary phase particle size is 3m.

**Solvents**

A : Aqueous solvent = 10mMol Ammonium Acetate + 0.1% Formic Acid

B : Organic solvent = 95 %Acetonitrile + 0.05% Formic Acid

**Method**

The generic method used has 5.5 minute runtime, which comprises of a 4.7-minute gradient (0-100% B) followed by a 0.6 minute column flush and 0.2 minute re-equilibration step.

**Flow rate**

The above method has a flow rate of 3ml/mins

**Conditions used for NMR**

**Hardware**

Gradient :

Volume(ml)	A	B
0	70%	30%
240	0%	100%

**Intermediate 1: 6-Chloro-4-cyclopropyl-nicotinic acid**

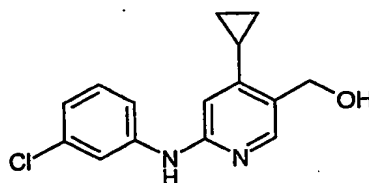

6-Chloronicotinic acid (15.8g, 100mmol) was dissolved in dry THF (100ml) and cooled to 0°C. A 0.5M solution of cyclopropylmagnesium bromide in THF (500ml, 250mmol) was added dropwise over 75mins and the mixture was stirred at 0°C for 1hr then at room temperature overnight. The solution was cooled to -60°C and glacial acetic acid (25ml) was added over 15mins, followed by manganese(III) acetate dihydrate (53.6g, 200mmol). The mixture was stirred at -60°C for 30mins then at room temperature for 3hr. The mixture was filtered and the filtrate was evaporated. The resultant gum was taken up in DCM (500ml) and water (500ml), separated and the aqueous was extracted with DCM (250ml). The combined organic layers were washed with water (250ml), then extracted with a mixture of water (150ml) and 2M sodium hydroxide (70ml). The extract was washed with DCM (50ml), then acidified with conc hydrochloric acid. The resultant solid was filtered off, washed with water and dried to give the title compound as a brown solid (5.24g). LC/MS,  $t_r = 1.97$  min, Molecular ion observed (MH<sup>+</sup>) = 198 consistent with the molecular formula C<sub>9</sub>H<sub>8</sub><sup>35</sup>ClNO<sub>2</sub>

**Intermediate 2: 6-(3-Chloro-phenylamino)-4-cyclopropyl-nicotinic acid**

A mixture of Intermediate 1 (5.22g, 26.4mmol) and 3-chloroaniline (25ml) was heated on an oil bath at 150°C for 2hrs. The reaction mixture was cooled and taken up in a mixture of water (40ml), 2M sodium hydroxide (30ml) and ether (100ml). The layers were separated and the aqueous was washed with ether (2 x 100ml). The aqueous was acidified with concentrated hydrochloric acid, the solid was filtered off, washed with water and dried to give the title compound as a brown solid (6.38g)

LC/MS  $t = 3.44$ min, Molecular ion observed ( $MH^+$ ) = 289 consistent with the molecular formula  $C_{15}H_{13}^{35}ClN_2O_2$

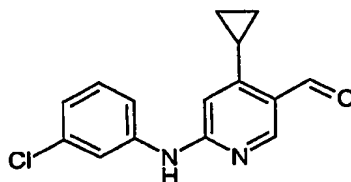

**Intermediate 3: [6-(3-Chloro-phenylamino)-4-cyclopropyl-pyridine-3-yl]-methanol**

Isobutylchloroformate (2.5ml, 19.3mmol) and N-methylmorpholine (2.2ml, 19.3mmol) were successively added to a stirred solution of Intermediate 2 (5.56g, 19.3mmol) in 1,2 dimethoxyethane (125ml) at -20°C and stirring was continued for 30 minutes at -20°C. The precipitate was filtered off, discarded and a solution of  $NaBH_4$  (1.46g, 38.5mmol) in water (10ml) was added over 5mins at 0°C. The reaction mixture was stirred for 30 minutes, quenched with water and extracted with ethyl acetate. The combined organic extracts were washed with brine, dried ( $MgSO_4$ ), and evaporated. The resultant gum was purified by chromatography on silica gel (dichloromethane/ether 1:1) to give the title compound as a cream solid (3.44g)

LC/MS,  $t = 2.57$ min, Molecular ion observed ( $MH^+$ ) = 275 consistent with the molecular formula  $C_{15}H_{15}^{35}ClN_2O$

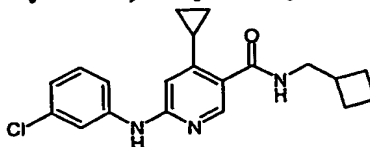

**Intermediate 4: 6-(3-Chloro-phenylamino)-4-cyclopropyl-pyridine-3-carbaldehyde**

Manganese(IV)oxide, and sodium chloride were added to a stirred solution of Intermediate 3 (3.44g) in dichloromethane (40ml). After stirring at 21°C for 18 hours, the precipitate was filtered off, washed with dichloromethane, and dried in vacuo to yield the title compound as a yellow solid (3.31g)

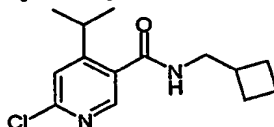

LC/MS,  $t = 3.65$ min, Molecular ion observed ( $MH^+$ ) = 273 consistent with the molecular formula  $C_{15}H_{13}^{35}ClN_2O$

PB60755P

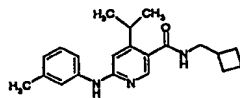

**Intermediate 5: 6-(3-Chloro-phenylamino)-N-cyclobutylmethyl-4-cyclopropyl-nicotinamide.**

In a manner similar to Intermediate 10, 6-chloro-N-cyclobutylmethyl-4-cyclopropyl-nicotinamide (Intermediate 21) (80mg, 0.3mmol) and 3-chloroaniline (77mg, 0.6mmol) were reacted and the crude product purified by chromatography on the Biotage Horizon to give the title compound (59mg).

LC/MS,  $t = 3.46$  min, Molecular ion observed ( $MH^+$ ) = 356 consistent with the molecular formula  $C_{20}H_{22}^{35}ClN_3O$

**Intermediate 6: 6-Chloro-N-cyclobutylmethyl-4-isopropyl-nicotinamide**

To a solution of 6-chloro-N-cyclobutylmethyl-nicotinamide (Intermediate 19) (2.00 g) in dry tetrahydrofuran (5 ml) was added dropwise at  $0^\circ$  under nitrogen a 2.0M solution of 2.0M isopropylmagnesium chloride in THF (13.5ml) and the solution stirred at room temperature for 15 hours. It was cooled to  $0^\circ$  and dry methanol added dropwise and the solution stirred for 15 minutes. 2,3-Dichloro-5,6-dicyano-1,4-benzoquinone was added and the mixture stirred at room temperature for 30 minutes then evaporated under reduced pressure. The residual liquid was warmed to  $50^\circ$  and t-butyl methyl ether added. The mixture was stirred under reflux for 1 hour then at room temperature for 1 hour and filtered. The filtrate was evaporated and the residue purified using Biotage chromatography (Merck 9385 silica gel), eluting with 1:4 ethyl acetate:isohexane to afford the title compound (1.31g).

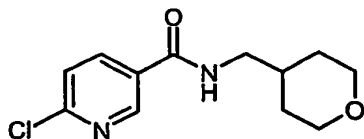

**Intermediate 7: N-Cyclobutylmethyl-4-isopropyl-6-m-tolylamino-nicotinamide**

A mixture of 6-chloro-N-cyclobutylmethyl-4-isopropyl-nicotinamide (Intermediate 6) (80mg) and 3-methylphenylamine was irradiated under microwave conditions at  $180^\circ C$  for 1 hour.

The crude product was diluted with dichloromethane (2ml) and the solution applied to a Sep-Pack column of silica gel. This was eluted firstly with dichloromethane, followed by dichloromethane/ether 5:1 to give the title compound (48mg).

LC/MS  $t = 3.39$  min,  $[MH^+]$  338 consistent with the molecular formula  $C_{20}H_{24}^{35}ClN_3O$

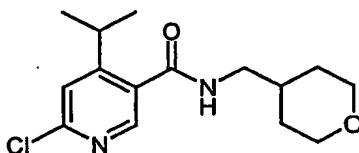

**Intermediate 8: 6-Chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

Triethylamine (3.4ml) was added to a solution of 6-chloronicotinoyl chloride (1.9 g, ex Lancaster) and C-(tetrahydro-pyran-4-yl)-methylamine (1.65 g) in dry dichloromethane (30 ml) dropwise at 0° under nitrogen over 15 min. The solution was stirred at 0° for 1 hour. Dichloromethane was removed under reduced pressure and ethyl acetate (50ml) added. The solution was washed with water (3 x 25 ml), dried (MgSO<sub>4</sub>) and evaporated. The residue was purified using Biotage chromatography over silica gel (Merck 9385) eluting with EtOAc, 3:1, to give the title compound (1.46g).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.1-1.25 (2H, m), 1.60 (2H, d), 1.79 (1H, m), 3.17 (2H, t), 3.26 (2H, t), 3.83 (2H, d of d), 7.64 (1H, d), 8.23 (1H, d of d), 8.75 (1H, t), 8.82 (1H, s).

**Intermediate 9 : 6-Chloro-4-isopropyl-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

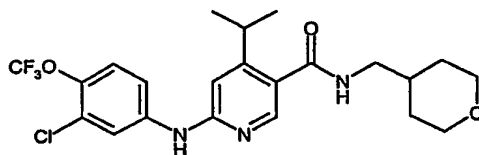

In a manner similar to Intermediate 6, 6-chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide (Intermediate 8) (1.46 g) and 2.0M isopropylmagnesium chloride in tetrahydrofuran (8.5 ml) afforded the title compound (624 mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.1-1.25 (2H, m), 1.19 (6H, d), 1.60 (2H, d), 1.75 (1H, m), 3.14 (2H, t), 3.21 (1H, m), 3.27 (2H, t), 3.85 (2H, d of d), 7.54 (1H, d), 8.26 (1H, s), 8.63 (1H, t).

LC/MS t = 2.4 min, [MH<sup>+</sup>] 297 consistent with the molecular formula C<sub>15</sub>H<sub>21</sub><sup>35</sup>ClN<sub>2</sub>O<sub>2</sub>

**Intermediate 10 : 6-(3-Chloro-4-trifluoromethoxy-phenylamino)- 4-isopropyl-N-(tetrahydropyran-4-ylmethyl)-nicotinamide**

A mixture of 6-chloro-4-isopropyl-N-(tetrahydropyran-4-ylmethyl)-nicotinamide (Intermediate 9) (100 mg), 3-chloro-4-trifluoromethoxyaniline (ex Lancaster, 143 mg), methanesulfonic acid (44  $\mu$ l) in 1,4-dioxane (0.8 ml) was irradiated under microwave conditions at 180° for 30 minutes.

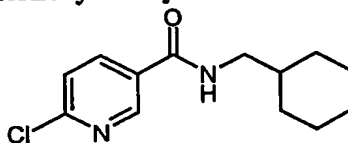

PB60755P

Purification of the crude mixture by MDAP detailed at the beginning of the experimental section afforded the title compound as a white solid (109 mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.6-1.22 (8H, d,m), 1.60-1.63 (2H, d), 1.75 (1H, m), 3.12 (2H, t), 3.26 (2H, t), 3.41 (1H, m), 3.85 (2H, d), 6.80 (1H, s), 7.45 (1H, d), 7.58 (1H, dd), 8.15 (1H, s), 8.25 (1H, d), 8.36 (1H, t), 9.58 (1H, s).

LC/MS  $t = 3.63$  min,  $[MH^+]$  472, consistent with molecular formula  $C_{22}H_{25}^{35}Cl F_3 N_3 O_3$

**Intermediate 11: 6-Chloro-*N*-cyclohexylmethyl-nicotinamide**

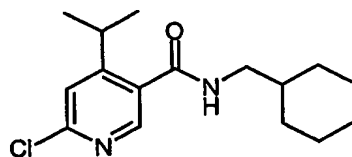

To a solution of 6-chloronicotinoyl chloride (1.5 g, ex Lancaster) in dry dichloromethane (15 ml) was added dropwise at 0° under nitrogen a solution of cyclohexanemethanamine (1.11 ml, ex Lancaster) and triethylamine (1.5 ml) in dry dichloromethane (15 ml) over 1 hour. The solution was stirred at 0° for 1 hour. Dichloromethane was removed under reduced pressure and ethyl acetate (30 ml) added. The solution was washed with water (3 x 20 ml), dried (MgSO<sub>4</sub>) and evaporated to afford 6-chloro-*N*-cyclohexylmethyl-nicotinamide (1.96g).

NMR (DMSO-d<sub>6</sub>)  $\delta$  0.85-1.0 (2H, m), 1.1-1.25 (3H, m), 1.54 (1H, m), 1.55-1.75 (5H, m), 3.11 (2H, t), 7.64 (1H, d), 8.23 (1H, d of d), 8.69 (1H, t), 8.82 (1H, s).

LC/MS  $t = 2.9$  min, Molecular ion observed  $[MH^+]$  253 consistent with molecular formula  $C_{13}H_{17}^{35}ClN_2O$

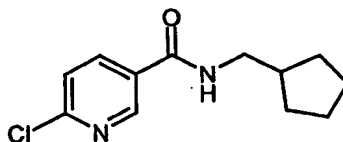

**Intermediate 12: 6-Chloro-*N*-cyclohexylmethyl-4-isopropyl-nicotinamide**

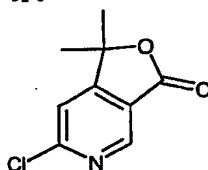

To a solution of 6-chloro-*N*-cyclohexylmethyl-nicotinamide (Intermediate 11) (0.89 g) in dry tetrahydrofuran (5 ml) was added dropwise at 0° under nitrogen a 2.0M solution of isopropylmagnesium chloride (5.3 ml, ex Aldrich) and the solution stirred at room temperature for 15 hours. It was cooled to 0° and dry methanol (0.86 ml) added dropwise and the solution stirred for 15 minutes. 2,3-Dichloro-5,6-dicyano-1,4-benzoquinone (0.88 g) was added and the mixture stirred at room temperature for 30 minutes then evaporated under reduced pressure to ca. 6 ml. The residual liquid was warmed to 50° and *t*-butyl methyl ether (20 ml) added. The mixture was stirred under reflux for 1 hour then at room temperature for 1 hour and filtered. The filtrate was evaporated and the residue purified using Biotage chromatography (Merck 9385 silica gel) with 1:4 ethyl acetate:isohexane to afford 6-chloro-*N*-cyclohexylmethyl-4-isopropyl-nicotinamide (886 mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  0.85-1.0 (2H, m), 1.1-1.25 (3H, m), 1.19 (6H, d), 1.50 (1H, m), 1.55-1.75 (5H, m), 3.08 (2H, t), 3.22 (1H, m), 7.53 (1H, s), 8.24 (1H, s), 8.57 (1H, t).

LC/MS,  $t = 3.2$  min, Molecular ion observed  $[MH^+]$  = 295 consistent with the molecular formula  $C_{16}H_{23}^{35}ClN_2O$ .

**Intermediate 13: 6-Chloro-N-cyclopentylmethyl-nicotinamide**

In a manner similar to Intermediate 11, 6-chloronicotinoyl chloride (0.50 g) and cyclopentanemethylamine hydrochloride (385 mg) afforded the title compound (534 mg).  
 NMR (DMSO-d<sub>6</sub>)  $\delta$  1.2-1.3 (2H, m), 1.45-1.65 (4H, m), 1.65-1.75 (2H, m), 2.13 (1H, m), 3.20 (2H, t), 7.64 (1H, d), 8.23 (1H, d of d), 8.74 (1H, t), 8.82 (1H, s).  
 LC/MS  $t = 2.7$  min,  $[MH^+]$  239, consistent with the molecular formula  $C_{12}H_{15}^{35}ClN_2O$

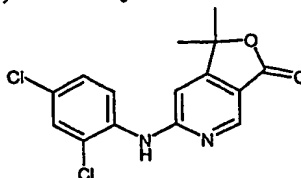

**Intermediate 14: 6-(3-Chloro-phenylamino)- 4-(1-hydroxy-methyl-ethyl)-N-(tetrahydropyran-4-ylmethyl)-nicotinamide****a) 6-Chloro-1,1-dimethyl-1H-furo[3,4-c]pyridin-3-one**

To a solution of 2,2,6,6-tetramethylpiperidine (ex Aldrich, 13.44g) in tetrahydrofuran (90ml) at  $-55^\circ\text{C}$  under nitrogen was added dropwise 1.6M butyl lithium in hexane (ex Aldrich, 80ml). After 30 minutes a solution of 6-chloronicotinic acid (ex Aldrich, 5g) in tetrahydrofuran (40ml) was added dropwise and the solution stirred at  $-71^\circ\text{C}$  for 2 hours.

The solution was treated with acetone (23ml) and then allowed to warm to room temperature. The solvent was removed under reduced pressure and the residue dissolved in water (100ml) and acidified to pH 3 with concentrated hydrochloric acid. The precipitated white solid was filtered off washed with water and dried to afford the title compound (4.42g).

NMR (DMSO-d<sub>6</sub>)  $\delta$  6.65 (6H, s), 8.11 (1H, s), 8.91 (1H, s)

LC/MS  $t = 2.0$  min,  $[MH^+]$  198, consistent with molecular formula  $C_9H_8^{35}ClNO_2$

**b) 6-(2,4-Dichloro-phenylamino)-1,1-dimethyl-1H-furo[3,4-c]pyridin-3-one**

A mixture of 6-chloro-1,1-dimethyl-1H-furo[3,4-c]pyridin-3-one (500mg), 2,4-dichloroaniline (ex Lancaster, 822mg), methanesulfonic acid (329 $\mu$ l) in 1,4-dioxane (3ml) was irradiated under microwave conditions at  $180^\circ$  for 30 minutes. The solid was dissolved in ethyl acetate (50ml) and washed with 5% sodium bicarbonate and water. The organic layer was dried over anhydrous

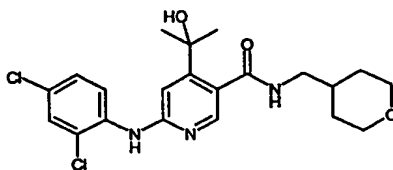

PB60755P

magnesium sulphate, filtered and evaporated under reduced pressure. Purified by trituration with isohexane followed by trituration with ether to afford the title compound as a pale brown solid (360mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  5.8 (6H, s), 6.93 (1H, s), 7.44 (1H, dd), 7.69 (1H, d), 7.77 (1H, d), 8.55 (1H, s), 9.40 (1H, s).

LC/MS t = 3.3 min, [MH<sup>+</sup>] 323, consistent with molecular formula C<sub>15</sub>H<sub>12</sub><sup>35</sup>Cl<sub>2</sub>N<sub>2</sub>O<sub>2</sub>

**c) 6-(2,4-Dichloro-phenylamino)- 4-(1-hydroxy-methyl-ethyl)-N-(tetrahydropyran-4-ylmethyl)-nicotinamide**

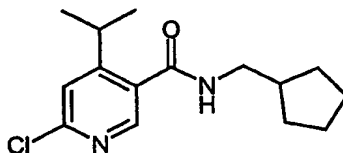

To a solution of 4-aminomethyltetrahydropyran (ex Combi-Blocks, Inc, 267mg) in dry dichloromethane (10ml) under nitrogen, was added dropwise 2.0M trimethylaluminium in hexane (ex Aldrich, 1.16ml) and the solution stirred for 15 minutes. Then 6-(2,4-dichloro-phenylamino)-1,1-dimethyl-1H-furo[3,4-c]pyridin-3-one (150mg) was added and the mixture stirred at 40°C overnight. A further portion of 4-aminomethyltetrahydropyran (107mg) and 2.0M trimethylaluminium in hexane (466 $\mu$ l) in dry dichloromethane (5ml) was added and the mixture stirred for 24h.

The solvent was evaporated under reduced pressure and the residue partitioned between ethyl acetate (20ml) and water (3 x 10ml) and the aqueous layer separated. The organic layer was dried over anhydrous magnesium sulphate, filtered and evaporated under reduced pressure. Purified using the Biotage Horizon system detailed at the beginning of the experimental section to afford the title compound as a white solid (118mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.23 (2H, m), 1.46 (6H, s), 1.60-1.63 (2H, d), 1.79 (1H, m), 3.11 (2H, t), 3.28 (2H, t), 3.85 (2H, d), 6.07 (1H, s), 7.23 (1H, s), 7.36 (1H, dd), 7.61 (1H, d), 8.06 (2H, t), 8.68 (1H, t), 8.78 (1H, s).

LC/MS t = 3.1 min, [MH<sup>+</sup>] 437, consistent with molecular formula C<sub>21</sub>H<sub>22</sub><sup>35</sup>Cl<sub>2</sub>N<sub>3</sub>O<sub>3</sub>

**Intermediate 15: 6-Chloro-N-cyclopentylmethyl-4-isopropyl-nicotinamide**

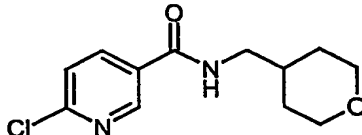

In a manner similar to Intermediate 12, 6-chloro-N-cyclopentyl-nicotinamide (Intermediate 13) (532 mg) and 2.0M isopropylmagnesium chloride in tetrahydrofuran (3.4 ml) afforded the title compound (166 mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.19 (6H, d), 1.2-1.3 (2H, m), 1.45-1.65 (4H, m), 1.65-1.75 (2H, m), 2.10 (1H, m), 3.17 (2H, t), 3.21 (1H, m), 7.53 (1H, s), 8.23 (1H, s), 8.61 (1H, t).

LC/MS  $t = 3.1$  min,  $[MH^+]$  281, consistent with the molecular formula  $C_{15}H_{21}^{35}ClN_2O$ .

**Intermediate 16: 6-Chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

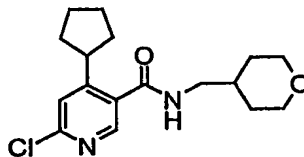

A suspension containing (tetrahydro-pyran-4-yl)-methylamine (13g) in dry dichloromethane (100ml) with triethylamine (35ml) was added dropwise at 0°C under nitrogen over 1 hour to a stirred solution of 6-chloronicotinoyl chloride (15g, ex Lancaster) in dry dichloromethane (150ml). The solution was stirred at 0°C for 1 hour, allowed to warm to room temperature and then stirred at room temperature for 1 hour. Dichloromethane was removed under reduced pressure and ethyl acetate (500ml) added. The solution was washed with water (3x100ml), dried (MgSO<sub>4</sub>), and evaporated to afford 6-chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide (18.7g)

NMR (CDCl<sub>3</sub>)  $\delta$  1.27-1.38 (2H, m), 1.57-1.64 (2H, m), 1.75-1.90 (1H, m), 3.25-3.37 (4H, m), 3.92 (2H, dd), 6.30 (1H, bs), 7.35 (1H, d), 8.01 (1H, d), 8.66 (1H, d)

LC/MS,  $t = 1.75$  min, Molecular ion observed  $[MH^+] = 255$  consistent with the molecular formula  $C_{12}H_{15}^{35}ClN_2O_2$

**Intermediate 17: 6-Chloro-4-cyclopentyl-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

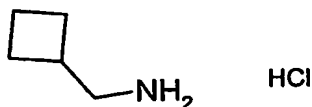

To a solution of 6-chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide (Intermediate 8) (7 g) in dry tetrahydrofuran (50 ml) was added dropwise at 0°C under nitrogen, cyclopentylmagnesium chloride (2M solution in diethyl ether, 42 ml, ex Aldrich) and the solution stirred at room temperature for 15 hours. It was cooled to 0°C and dry methanol (20 ml) added dropwise and the solution stirred for 15 minutes. 2,3-Dichloro-5,6-dicyano-1,4-benzoquinone (6.9 g) was added and the mixture stirred at room temperature for 1 hour then evaporated under reduced pressure to ca. 20 ml. The residual semi-solid was treated with ethyl acetate (3x100ml) and warmed to 50°C. The solids were filtered off and the filtrate was evaporated and the residue purified using Biotage Horizon (gradient 10% to 50% ethyl acetate and isohexane) to afford 6-chloro-4-cyclopentyl-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide (5.2g).

NMR (CDCl<sub>3</sub>)  $\delta$  1.24-1.39 (2H, m), 1.42-1.53 (2H, m), 1.55-1.69 (4H, m), 1.70-1.89 (3H, m), 1.99-2.08 (2H, m), 3.25-3.38 (5H, m), 3.93 (2H, dd), 5.96-6.04 (1H, m), 7.21 (1H, s), 8.20 (1H, s).

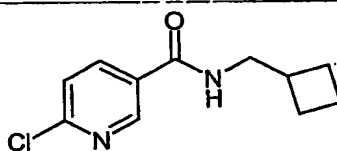

LC/MS,  $t = 2.74$  min, Molecular ion observed  $[MH^+] = 323$  consistent with the molecular formula  $C_{17}H_{23}^{35}ClN_2O_2$

PB60755P

**Intermediate 18: C-cyclobutyl-methylamine hydrochloride**

A solution of borane-tetrahydrofuran complex (1M in tetrahydrofuran, 120ml) was added over 10 minutes to a solution of cyclobutanecarbonitrile (8.1g) [Lancaster] in dry tetrahydrofuran (20ml) under nitrogen at room temperature. The solution was refluxed overnight, then cooled to 20°. Methanol (150ml) was added dropwise over 15 minutes keeping the temperature below 25°. The mixture was cooled to 0° and dry hydrogen chloride was bubbled through for 30 minutes. The resulting mixture was refluxed for 1.5 hours, evaporated and the residue re-evaporated twice from methanol. Ether (150ml) was added and the resulting solid was filtered off. The solid was taken up in hot isopropanol (50ml), filtered and hot acetonitrile (30ml) added. On cooling, the solid was filtered off to give the title compound (5.7g)

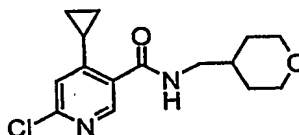

NMR (DMSO-d<sub>6</sub>) δ 1.8 (4H, m), 2.0 (2H, m), 2.54 (1H, m), 2.80 (2H, d), 8.0 (3H, s)

**Intermediate 19: 6-Chloro-N-cyclobutylmethyl-nicotinamide**

A stirred mixture of 6-chloronicotinoyl chloride (1.9g, ex-Lancaster) and C-cyclobutyl-methylamine hydrochloride (Intermediate 18) (1.52g) in dry dichloromethane (30 ml) was cooled to 0° C and then triethylamine (3.4 ml) was added dropwise over 5 min at 0°C. The mixture was stirred at 0°C for 15 min, then at ambient temperature for 90 min. The solution was washed with water (30 ml), then with water acidified to pH 5 with aqueous 2N hydrochloric acid, and then with water. The dried (MgSO<sub>4</sub>) organic layer was evaporated to give the title compound (2.02g).

NMR (DMSO-d<sub>6</sub>) δ 1.71 (2H, m), 1.82 (2H, m), 1.99 (2H, m), 2.52 (1H, m excess), 3.31 (2H, t), 7.64 (1H, d), 8.22 (1H, d of d), 8.71 (1H, t), 8.81 (1H, d).

LC/MS t = 2.51 min, Molecular ion observed [MH<sup>+</sup>] = 225 consistent with the molecular formula C<sub>11</sub>H<sub>13</sub><sup>35</sup>ClN<sub>2</sub>O

**Intermediate 20: 6-Chloro-4-cyclopropyl-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

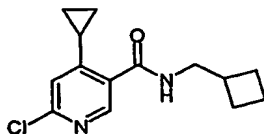

To a solution of 6-chloro-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide (Intermediate 8) (3.5 g) in dry tetrahydrofuran (25 ml) was added dropwise at 0°C under nitrogen a 0.5M, in tetrahydrofuran,

a solution of cyclopropylmagnesium chloride (82 ml, ex Aldrich) and the solution stirred at room temperature for 15 hours. It was cooled to 0°C and dry methanol (10 ml) added dropwise and the solution stirred for 15 minutes. 2,3-Dichloro-5,6-dicyano-1,4-benzoquinone (3.1 g) was added and the mixture stirred at room temperature for 1 hour then evaporated under reduced pressure to ca. 6 ml. The residual semi-solid was warmed to 50°C with ethyl acetate (3x100ml). The solids were filtered off and the filtrate was evaporated. The residue was purified using Biotage Horizon (gradient 10% to 50% ethyl acetate and isohexane) to afford 6-chloro-4-cyclopropyl-N-(tetrahydropyran-4-ylmethyl)-nicotinamide (1.2g).

NMR (CDCl<sub>3</sub>) δ 0.82-0.95 (2H, m), 1.16-1.28 (2H, m), 1.35-1.48 (2H, m), 1.69 (2H, dd), 1.85-1.98 (1H, m), 2.28-2.38 (1H, m), 3.35-3.47 (4H, m), 4.03 (2H, dd), 6.19 (1H, bs), 6.79 (1H, s), 8.34 (1H, s)

LC/MS, t = 2.20 min, Molecular ion observed [MH<sup>+</sup>] = 295 consistent with the molecular formula C<sub>15</sub>H<sub>19</sub><sup>35</sup>ClN<sub>2</sub>O<sub>2</sub>

**Intermediate 21: 6-Chloro-N-cyclobutylmethyl-4-cyclopropyl-nicotinamide**

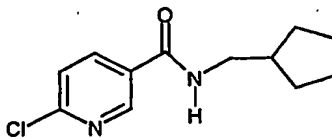

In a manner similar to Intermediate 20, 6-chloro-N-cyclobutylmethyl-nicotinamide (Intermediate 19) (9g) gave the title compound (4.4g)

NMR (DMSO-d<sub>6</sub>) δ 0.91 (2H, m), 1.08 (2H, m), 1.75 (2H, m), 1.82 (2H, m), 2.00 (2H, m), 2.17 (1H, m), 2.52 (1H, m excess), 3.28 (2H, t), 6.99 (1H, s), 8.20 (1H, s), 8.59 (1H, t).

LC/MS t = 2.61 min, Molecular ion observed (MH<sup>+</sup>) = 265 consistent with the molecular formula C<sub>14</sub>H<sub>17</sub><sup>35</sup>ClN<sub>2</sub>O

**Intermediate 22: 6-Chloro-N-cyclopentylmethyl-nicotinamide**

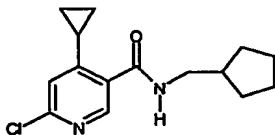

This was prepared in the same manner as the compound in Intermediate 19 from C-cyclopentylmethylamine hydrochloride (prepared as in J Med Chem 1997, 40, 3207) (10g) to give the title compound 12.2g

NMR (MeOD) δ 1.26 – 1.35 (2H, m), 1.51-1.72 (4H, m), 1.73- 1.86 (2H, m), 2.16-2.28 (1H,m), 3.29-3.36 (2H, m), 7.55 (1H, d), 8.18 (1H, dd), 8.77 (1H, dd).

LC / MS t= 2.64 min, molecular ion observed [MH<sup>+</sup>] = 239 consistent with molecular formula C<sub>12</sub>H<sub>15</sub>ClN<sub>2</sub>O

**Intermediate 23: 6-Chloro-N-cyclopentylmethyl-4-cyclopropyl-nicotinamide**

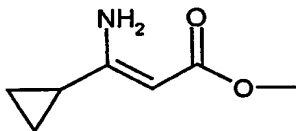

PB60755P

This was prepared from 6-chloro-N-cyclopentylmethyl-nicotinamide (Intermediate 22) (12.1 g) in a manner similar that described in Intermediate 20 to give chloro-N-cyclopentylmethyl-4-cyclopropyl-nicotinamide (9.55g).

NMR (MeOD)  $\delta$  0.86-0.92 (2H, m), 1.12-1.19 (2H, m), 1.27-1.35 (2H, m), 1.53-1.73 (4H, m), 1.77-1.86 (2H, m), 2.15-2.26 (2H, m), 3.28-3.36 (2H, m), 4.87 (1H, s), 6.99(1H, s), 8.20 (1H, s)  
LC / MS  $t_r$  = 2.81 min, molecular ion observed  $[MH^+] = 279$  consistent with molecular formula  $C_{15}H_{19}ClN_2O$

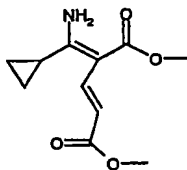

**Intermediate 24: 3-Amino-3-cyclopropyl-acrylic acid methyl ester**

To a stirred solution of 3-cyclopropyl-3-oxo-propionic acid methyl ester (10g, ex Butt Park,) in methanol (200ml) was added ammonium acetate (26g) and the mixture was stirred at room temperature for 18 hours overnight. The methanol was evaporated under reduced pressure, and the residue treated with dichloromethane (100ml). The suspension was stirred for 30 minutes at room temperature. The solid formed was filtered, and washed with dichloromethane. The dichloromethane was evaporated under reduced pressure to afford the title product (10g) as a clear oil, which solidified on standing.

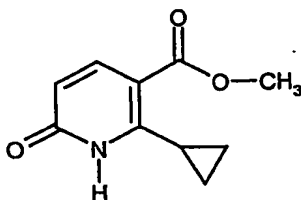

NMR NMR ( $CDCl_3$ )  $\delta$  0.60 – 0.85 (4H,m), 1.29 – 1.39 (1H, m), 3.55 (3H, s), 4.40 (1H, s), 8.28 – 8.85 (bs partially exchanged NH)

**Intermediate 25: 4-(1-Amino-1-cyclopropyl-methylene)-pent-2-enedioic acid dimethyl ester**

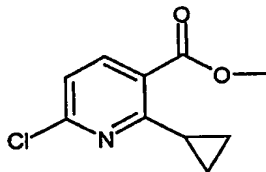

To 3-amino-3-cyclopropyl-acrylic acid methyl ester (Intermediate 24 ) (8.8g) in toluene (100ml) was added propynoic acid methyl ester (6ml). The mixture was heated to 85°C for 47 hours, and when cool, was evaporated under reduced pressure. The residue was taken up into toluene (30ml) and subjected to microwave irradiation at 110°C for 30 min. The toluene was removed under reduced pressure and the residue was chromatographed using a Biotage (ethyl acetate 40% / isohexane 60%) to afford the title compound (10.6g).

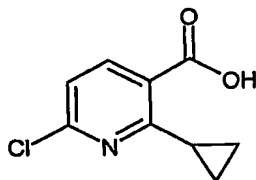

NMR ( $CDCl_3$ )  $\delta$  0.70 – 0.77 (2H, m), 0.98 – 1.06 (2H, m), 1.93 – 2.03 (1H, m), 3.56 (3H, s), 3.71 (3H, s), 6.13 (1H, d), 8.00 (1H, d)

**Intermediate 26: 2-Cyclopropyl-6-oxo-1,6-dihydro-pyridine-3-carboxylic acid methyl ester**

To a solution of 4-(1-amino-1-cyclopropyl-methylene)-pent-2-enedioic acid dimethyl ester (Intermediate 25)(1.5g) in dimethylformamide (10ml) was added sodium tert-butoxide (100mg) and the mixture was refluxed for 6.5 hours. The mixture was purified by Biotage chromatography over silica gel, using ethyl acetate (70%) / isohexane (30%) to afford the title compound (1.1g) as an off white solid  
 NMR (DMSO)  $\delta$  0.97 – 1.16 (4H, m), 2.99 – 3.10 (1H, m), 3.78 (3H, s), 6.14 – 6.26 (1H, m), 7.79 – 7.88 (1H, m), 11.0 (1H, s).

**Intermediate 27: 6-Chloro-2-cyclopropyl-nicotinic acid methyl ester**

To 2-cyclopropyl-6-oxo-1,6-dihydro-pyridine-3-carboxylic acid methyl ester (Intermediate 26) (1.1g) was added phenyl dichlorophosphate (10ml). The suspension was heated to 180°C and stirred at 180°C for 10 minutes. The dark mixture was allowed to cool to room temperature, and an excess of ice was added. After 15 minutes a saturated solution of sodium hydrogen carbonate (80ml) was added carefully. The mixture was extracted with ethyl acetate (2x 50ml), and the combined, dried (Na<sub>2</sub>SO<sub>4</sub>) organic extracts were evaporated under reduced pressure to give a pale yellow oil. This purified by Biotage chromatography over silica gel with ethyl acetate (60%) / isohexane (40%), to afford the title compound (1.23g) as a white solid.  
 NMR (CDCl<sub>3</sub>)  $\delta$  1.04 - 1.12 (2H, m), 1.19 – 1.25 (2H, m), 3.04 – 3.12 (1H, m), 3.94 (3H, s), 7.10 (1H, d), 8.07 (1H, s).

**Intermediate 28: 6-Chloro-2-cyclopropyl-nicotinic acid**

To 6-chloro-2-cyclopropyl-nicotinic acid methyl ester (Intermediate 27) (1.23g) was added tetrahydrofuran (9ml) and water (3ml) followed by lithium hydroxide (0.72g). The mixture was

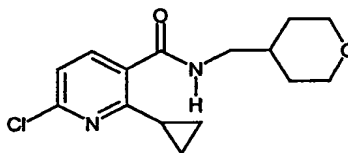

PB60755P

stirred vigorously at room temperature overnight, and then evaporated under reduced pressure. To the residue was added water (50ml), which was then acidified to pH1 using conc.HCL. The white precipitate that formed was filtered and washed with water (50ml) and dried to afford the title compound (1g)

NMR (DMSO)  $\delta$  0.95 – 1.09 (4H, m), 3.03 – 3.12 (1H, m), 7.31 (1H, d), 8.12 (1H, s), 13.50 (1H, s).

LC / MS  $t_r$  = 2.58 min,  $[MH^+]$  = 198 consistent with molecular formula  $C_9H_8ClNO_2$

**Intermediate 29: 6-Chloro-2-cyclopropyl-N-(tetrahydro-pyran-4-ylmethyl)-nicotinamide**

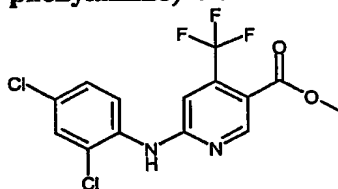

To a solution of 6-chloro-2-cyclopropyl-nicotinic acid (Intermediate 28) (2.1g) in dimethylformamide (20ml) was added 1-hydroxybenzotriazole (730mg), 1-[3-(dimethylamino)propyl]-3-ethylcarbodiimide hydrochloride (2.31g), N-ethyl morpholine(3.2ml) followed by (tetrahydro-pyran-4-yl)-methylamine (1.9g). The mixture was stirred at room temperature overnight. Water (100ml) was added and the mixture was extracted with ethyl acetate

(2x 100ml). The combined organic layers were washed with 10% sodium hydrogen carbonate (100ml), and brine (50ml). The dried ( $Na_2SO_4$ ) organic layer was evaporated under reduced pressure. The residue was purified by Biotage chromatography over silica using ethyl acetate(60%) / isohexane (40%) to give the title compound (2.81g) as a white solid.

NMR (MeOD)  $\delta$  0.96 – 1.10 (4H, m), 1.28 – 1.41 (2H, m), 1.65 – 1.73 (2H, m), 1.80 – 1.94 (1H, m), 2.24 – 2.33 (1H, m), 3.24 – 3.29 (2H, m), 3.37 – 3.47 (2H, m), 3.92 – 4.00 (2H, m), 7.16 (1H, d), 7.62 (1H, d).

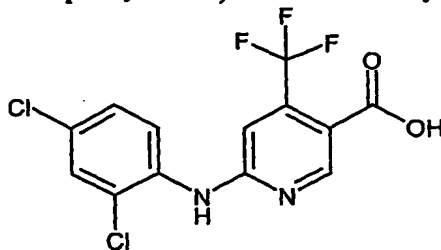

LC / MS  $t_r$  = 2.39 min, molecular ion observed  $[MH^+]$  = 295 consistent with molecular formula  $C_{15}H_{19}ClN_2O_2$

**Intermediate 30: 6-(2,4-Dichloro-phenylamino)-4-(trifluoromethyl)-nicotinic acid methyl ester**

A mixture of methyl-6-chloro-4-(trifluoromethyl)-nicotinate (2.0 g, 8.37 mmol ex Fluorochem) and 2,4-dichloroaniline (4.05 g, 25 mmol) was heated at 130°C for 15 h, to afford the title compound that was used for the next step without further purification.

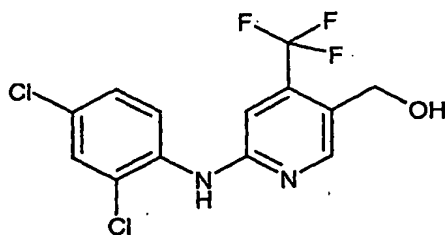

MS  $m/z$  (ESI+): 365 ( $MH^+$ ).

**Intermediate 31: 6-(2,4-Dichloro-phenylamino)-4-trifluoromethyl-nicotinic acid**

A solution of KOH (1.4 g, 25 mmol) in 20 mL of EtOH / H<sub>2</sub>O (1:1) was added to the crude mixture from Intermediate 30 and the resulting mixture was stirred under reflux for 3h. The solution was concentrated in vacuo, diluted with water and washed three times (3 x 15 mL) with diethyl ether. Upon acidification of the aqueous layer to pH1 with 37% HCl, the title compound precipitated out as hydrochloride salt that was filtered and dried under vacuum. The solid (2.89 g, 7.5 mmol) was then suspended in dichloromethane (20 mL), in the presence of PS-diisopropylethylamine (1.93 g, 7.5 mmol, loading 3.88 mmol/g, ex Argonaut Technologies) and stirred at room temperature for 30 min. After filtration of the resin and evaporation in vacuo of the solvent, the title compound was isolated as a white solid (2.62 g).

<sup>1</sup>H NMR (300 MHz, DMSO-d<sub>6</sub>) δ: 13.16 (s br, 1H); 9.49 (s, 1H); 8.67 (s, 1H); 7.94 (d, 1H); 7.67 (d, 1H); 7.43 (dd, 1H); 7.40 (s, 1H).

MS m/z (ESI<sup>+</sup>): 351 (MH<sup>+</sup>).

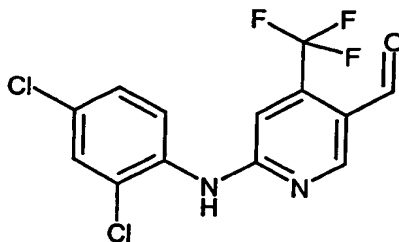

**Intermediate 32: [6-(2,4-Dichloro-phenylamino)-4-trifluoromethyl-pyridin-3-yl]-methanol**

To a solution of 6-(2,4-dichloro-phenylamino)-4-trifluoromethyl-nicotinic acid (Intermediate 31) (250mg) in DME (4mL), N-methylmorpholine (144mg) and isobutyl chloroformate (94μl) were added and the reaction mixture was stirred under nitrogen for 30min. The precipitate was filtered off, discarded, and sodium borohydride (55mg) was added to the filtrate at -15° and the reaction mixture was stirred at this temperature for 30 min. The solvent was removed in vacuo, and a solution of the residue in ethyl acetate was washed with aqueous 1M sodium hydroxide, followed by aqueous 5% sodium bicarbonate, water, and the dried (MgSO<sub>4</sub>) organic layer was concentrated to dryness to give the product as a yellow oil (200mg).

MS m/z (ESI<sup>+</sup>): 338 (MH<sup>+</sup>).

**Intermediate 33: 6-(2,4-Dichloro-phenylamino)-4-trifluoromethyl-pyridine-3-carbaldehyde**

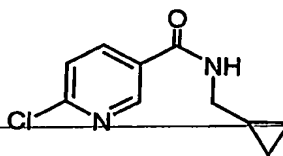

PB60755P

Manganese (IV) oxide (610mg) and sodium chloride (180mg) were added to a solution of [6-(2,4-dichloro-phenylamino)-4-trifluoromethyl-pyridin-3-yl]-methanol (Intermediate 32) (200mg) in dichloromethane (5ml) and the suspension was stirred at room temperature overnight. The solid was filtered off and the solvent removed under reduced pressure to afford the title compound (190mg).

MS  $m/z$  (ESI<sup>+</sup>): 336 (MH<sup>+</sup>)

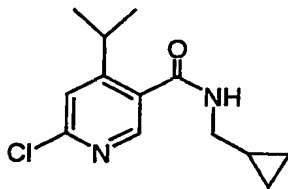

**Intermediate 34: 6-Chloro-N-cyclopropylmethyl-nicotinamide**

Prepared in a manner similar to Intermediate 11, using C-cyclopropyl-methylamine in place of cyclohexanemethanamine to give the title compound.

LC/MS  $t_r$  2.02 min. Molecular ion observed [MH<sup>+</sup>] 211 consistent with molecular formula C<sub>10</sub>H<sub>11</sub>ClN<sub>2</sub>O.

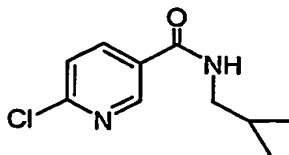

**Intermediate 35: 6-Chloro-N-cyclopropylmethyl-4-isopropyl-nicotinamide**

Prepared in a manner similar to intermediate 6, from Intermediate 34 using an extraction with dichloromethane followed by chromatography instead of warming with t-butyl methyl ether, to give the title compound.

LC/MS  $t_r$  2.60 min. Molecular ion observed [MH<sup>+</sup>] 253 consistent with molecular formula C<sub>13</sub>H<sub>17</sub>ClN<sub>2</sub>O.

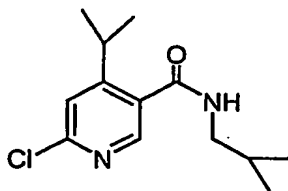

**Intermediate 36: 6-chloro-N-isobutyl-nicotinamide**

Prepared in a manner similar to intermediate 11, using isobutylamine in place of cyclohexanemethanamine to give the title compound.

LC/MS  $t_r$  = 2.51 min. Molecular ion observed  $[MH^+]$  213 consistent with molecular formula  $C_{10}H_{13}ClN_2O$ .

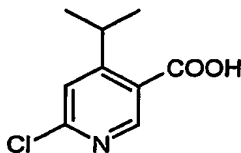

**Intermediate 37: 6-chloro-N-isobutyl-4-isopropyl-nicotinamide**

Prepared in a manner similar to intermediate 6, from Intermediate 36 using an extraction with ethyl acetate followed by chromatography instead of warming with t-butyl methyl ether, to give the title compound.

LC/MS  $t_r$  = 2.75 min. Molecular ion observed  $[MH^+]$  255 consistent with molecular formula  $C_{13}H_{19}ClN_2O$ .

**Intermediate 38: 6-Chloro-4-isopropyl-nicotinic acid.**

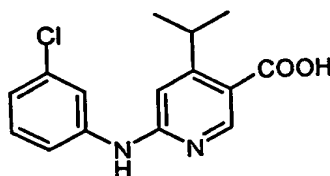

2M Isopropylmagnesium bromide in tetrahydrofuran (48 ml) was added dropwise over 1 hour to a solution of 6-chloronicotinic acid (6.0 g) in dry tetrahydrofuran (100 ml) at 0° under nitrogen and the solution stirred at 0° for 3 hours then at room temperature for 15 hours. It was cooled to -60° and acetic acid (48 ml), tetrahydrofuran (40 ml) and manganese (III) acetate dihydrate (20.4 g) added successively. The mixture was stirred at -70° for 30 minutes then at room temperature for 1 hour. The suspension was filtered through Celite and the filtrate evaporated under reduced pressure. The residue was partitioned between dichloromethane (150 ml) and water (120 ml) and the aqueous layer separated and washed with dichloromethane (2 x 50 ml). The combined organic layers were dried ( $MgSO_4$ ) and evaporated under reduced pressure to afford, after silica gel chromatography using 3:1 isohexane:ethyl acetate, 6-chloro-4-isopropyl-nicotinic acid (2.31g).

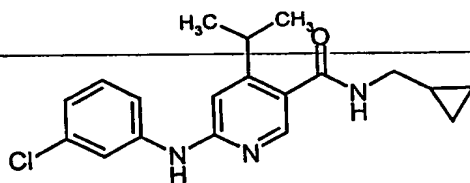

NMR ( $DMSO-d_6$ )  $\delta$  1.21 (6H, d), 3.76 (1H, m), 7.60 (1H, s), 8.67 (1H, s), 13.55 (1H, br s).

LC/MS  $t_r$  = 2.6 min,  $[MH^+]$  200 consistent with molecular formula  $C_9H_{10}^{35}ClNO_2$

PB60755P

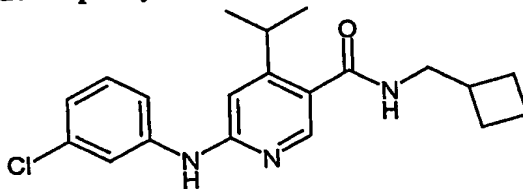

**Intermediate 39: 6-(3-Chloro-phenylamino)-4-isopropyl-nicotinic acid.**

A mixture of 6-chloro-4-isopropyl-nicotinic acid (Intermediate 38) (0.50 g) and 3-chloroaniline (265 mg) was stirred at 120° for 1½ hours. Isopropanol was added and the mixture chilled. Insoluble solid was filtered off, washed successively with isopropanol and ether and dried *in vacuo* at 50° to afford 6-(3-chloro-phenylamino)-4-isopropyl-nicotinic acid (0.51 g).  
 NMR (DMSO-d<sub>6</sub>)  $\delta$  1.19 (6H, d), 3.93 (1H, m), 6.85 (1H, s), 6.99 (1H, d), 7.31 (1H, t), 7.53 (1H, d), 8.00 (1H, s), 8.64 (1H, s), 9.73 (1H, s), 12.6 (1H, br s).  
 LC/MS  $t = 3.63$  min,  $[MH^+]$  291, consistent with molecular formula  $C_{15}H_{15}^{35}ClNO_2$

**Intermediate 40: 6-(3-Chloro-phenylamino)-N-cyclopropyl-4-isopropyl-nicotinamide.**

To a solution of 6-(3-chloro-phenylamino)-4-isopropyl-nicotinic acid (Intermediate 39) (48 mg) in dimethylformamide (2.5 ml) was added successively N-ethylmorpholine (69  $\mu$ l), cyclopropanemethylamine (17  $\mu$ l), 1-hydroxybenzotriazole hydrate (40 mg) and 1-(3-dimethylamino-propyl)-3-ethylcarbodiimide hydrochloride (40 mg). The solution was stirred for 3 hours and allowed to stand overnight. Dimethylformamide was removed under reduced pressure and ethyl acetate (8 ml) added. The solution was washed sequentially with 5% sodium bicarbonate solution (5 ml), water (5 ml) and brine (2 x 5 ml), dried (MgSO<sub>4</sub>) and evaporated to afford the title compound (43 mg).

LC/MS  $t = 3.47$  min,  $[MH^+]$  344, consistent with molecular formula  $C_{19}H_{22}^{35}ClN_3O$

**Intermediate 41: 6-(3-Chloro-phenylamino)-N-cyclobutylmethyl-4-isopropyl-nicotinamide**

A mixture of 6-chloro-N-cyclobutylmethyl-4-isopropyl-nicotinamide (Intermediate 6) (80mg) and 3-chloroaniline (0.5ml) was irradiated under microwave conditions at 180°C for 30mins. The mixture was diluted with dichloromethane (2ml) and chromatographed on silica gel. The excess aniline was removed

by elution with dichloromethane and then elution with dichloromethane/ether (5:1) gave the title compound (38mg).

NMR (DMSO-d<sub>6</sub>)  $\delta$  1.16 (6H, m), 1.74 (2H, m), 1.82 (2H, m), 2.00 (2H, m), 2.52 (1H, m excess), 3.23 (2H, t), 3.40 (1H, m), 6.78 (1H, s), 6.92 (1H, d), 7.27 (1H, t), 7.46 (1H, d), 8.04 (1H, s), 8.10 (1H, s), 8.33 (1H, t), 9.41 (1H, s)

LC/MS t = 3.65min, [MH<sup>+</sup>] 358 consistent with the molecular formula C<sub>20</sub>H<sub>24</sub><sup>35</sup>CIN<sub>3</sub>O

#### Intermediates Table

Intermediates 42 to 76 were prepared from Intermediates 6,37,21,35,29,17,23,9 and commercially available amines by the methods set out below

Method A: As for Intermediate 41: 6-(3-Chloro-phenylamino)-N-cyclobutylmethyl-4-isopropyl-nicotinamide

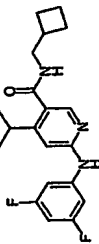

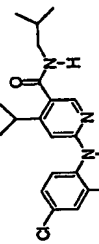

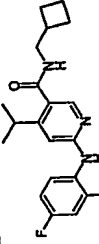

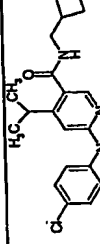

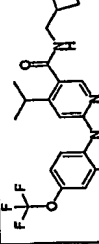

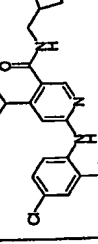

Method G: As for Method A, but with 2 equivalents of methanesulphonic acid present in the reaction mixture prior to microwave irradiation.

Purification Method B: MDAP as detailed at the beginning of the experimental

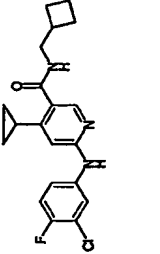

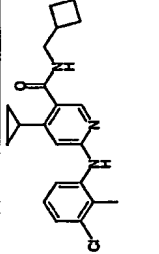

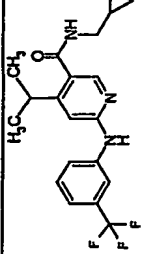

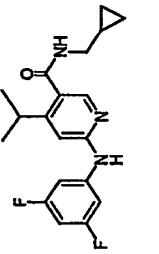

Purification Method F: Chromatography on silica gel as detailed in the preparation of Intermediate 41 (6-(3-Chloro-phenylamino)-N-cyclobutylmethyl-4-isopropyl-nicotinamide)

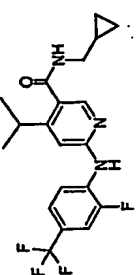

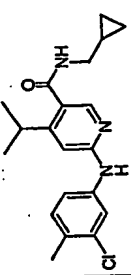

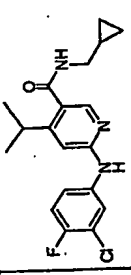

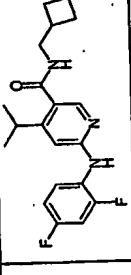

Purification Method H: Biotage Horizon as detailed at the beginning of the experimental

76	N-Isobutyl-4-isopropyl-6-(3- trifluoromethyl-phenylamino)- nicotinamide		G 30 min	H	3.53 380 $C_{20}H_{24}F_3N_3O$

**Example 1: (3-Chlorophenyl)-5-(cyclobutylaminomethyl-4-cyclopropyl-pyridin-2-yl)-amine acetate**

Intermediate 4 (90mg) in methanol (2ml) was added to 4A molecular sieves (70 mg). Aminocyclobutane (94 mg) was added, and the tube shaken for 1 hour. Glacial acetic acid (132  $\mu$ l) in dichloromethane (0.5ml) and MP-cyanoborohydride polymer reagent (Part number 800406, Argonaut Technologies Inc, 342 mg) were added and the reaction mixture shaken overnight. The polymer was filtered off, washed with methanol, and the filtrate evaporated in vacuo. The residue was purified by triturating the crude product with ether and water to yield the title compound (63 mg).

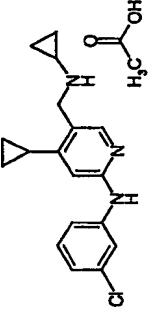

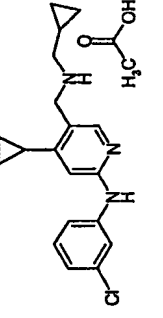

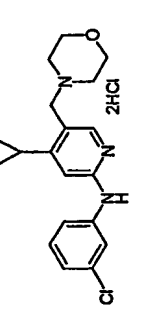

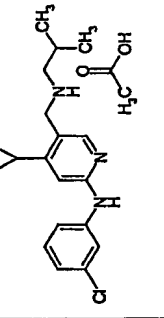

LC/MS  $t_r$ =2.45 min. Molecular ion observed  $[MH^+]$  328 consistent with molecular formula  $C_{19}H_{22}^{35}ClN_3$

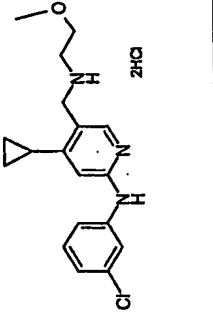

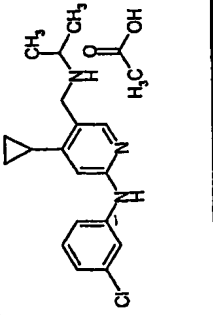

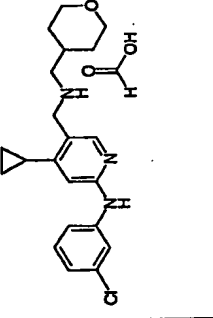

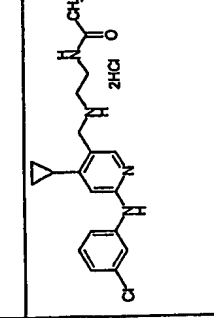

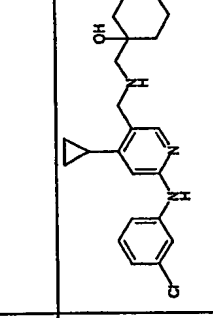

The products in Table 1 were prepared in a similar manner to the preparation of Example 1 from the intermediate 4 and commercially available starting materials except for purification of crude product which was purified by the methods give in the table below.

**Purification method:**

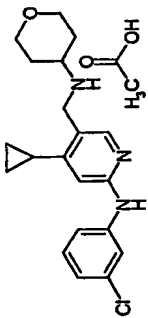

- A Triturate crude product with ether and water
- B MDAP then add excess ethereal HCl, and evaporate.
- C MDAP
- D Biotage Horizon then add excess ethereal HCl, and evaporate

11	(3-Chlorophenyl)-{4-cyclopropyl-5-[(tetrahydro-pyran-4-ylamino)-methyl]-pyridin-2-yl}-amine acetate		2.30 358 $C_{20}H_{24}^{35}ClN_3O$		

**Example 12: {5-[(Cyclobutylmethyl-amino)-methyl]-4-isopropyl-pyridin-2-yl}-m-tolyl-amine**

A solution of borane-tetrahydrofuran complex (1M in tetrahydrofuran, 0.3ml) was added to a solution of N-cyclobutylmethyl-4-isopropyl-6-m-tolylamino-nicotinamide (Intermediate 7), (33mg) in dry tetrahydrofuran (2ml) under nitrogen at room temperature. The solution was refluxed overnight then cooled to room temperature. Methanol (1ml) was added, the mixture cooled in ice and a 1M solution of hydrogen chloride in diethyl ether (1ml) added. The mixture was refluxed for 2hrs then evaporated to dryness and re-evaporated twice from methanol. The residue was purified by MDAP to give the title compound (4.5mg)

LC/MS t = 2.44 min, Molecular ion observed  $[MH]^+$  324, consistent with molecular formula  $C_{21}H_{29}N_3$ .

**Example 13: (3-Chloro-phenyl)-{5-[(cyclobutylmethyl-amino)-methyl]-4-cyclopropyl-pyridin-2-yl}-amine**

To a solution of 6-(3-chloro-phenylamino)-N-cyclobutylmethyl-4-cyclopropyl-nicotinamide (Intermediate 5), (100mg) in anhydrous tetrahydrofuran (2ml) was added 1.5M borane THF complex (0.95ml, 5eq) dropwise under nitrogen at room temperature. The mixture was stirred at room temperature for 30 minutes followed by heating at reflux for 18 hours. On cooling, methanol (3ml) was added slowly, and the mixture was stirred at room temperature for 1 hour. The mixture was evaporated under reduced pressure, and the residue was treated with 2N hydrochloric acid (3ml). The mixture was heated to 60° for 1 hour. On cooling, it was neutralised to pH 7.4 with aqueous saturated sodium hydrogen carbonate and extracted with ethyl acetate (3x 10ml). The ethyl acetate layers were combined, dried ( $MgSO_4$ ), evaporated under reduced pressure and the residue was purified using MDAP to give (3-chloro-phenyl)-{5-[(cyclobutylmethyl-amino)-methyl]-4-cyclopropyl-pyridin-2-yl}-amine (38mg) as white solid.

LC/MS t = 2.58 min, molecular ion observed  $[MH]^+$  342, consistent for  $C_{20}H_{24}^{35}ClN_3$

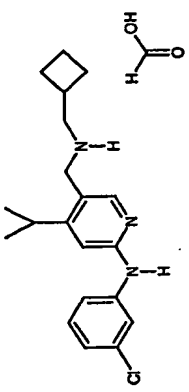

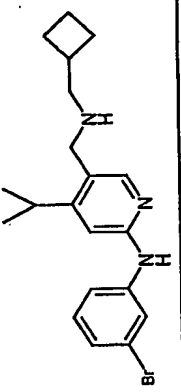

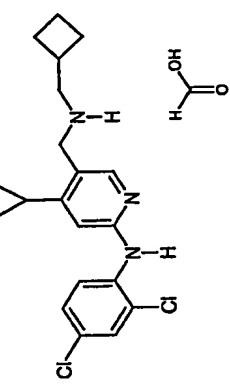

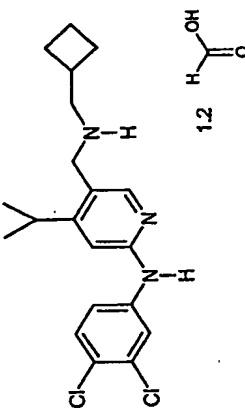

NMR (MeOD)  $\delta$  0.77-0.84 (2H, m), 1.10-1.19 (2H, m), 1.8-2.07 (5H, m), 2.15-2.25 (2H, m), 2.68-2.79 (1H, m), 3.15 (2H, d), 4.30 (2H, s), 6.41 (1H, s), 6.91 (1H, dd), 7.20 (1H, t), 7.35 (1H, dd), 7.84 (1H, t), 8.15 (1H, s), 8.49 (1H, br s).

The compounds in the table below were prepared using precursors that are all either described herein or are commercially available. The method used for the preparation is given in column 6 of the table.

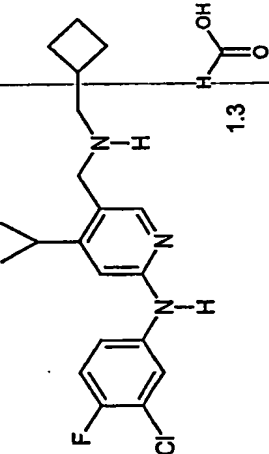

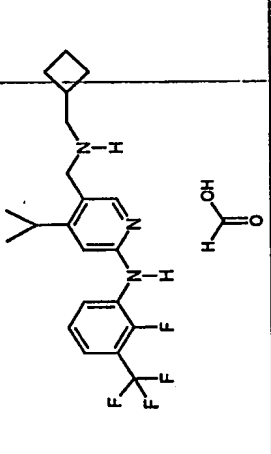

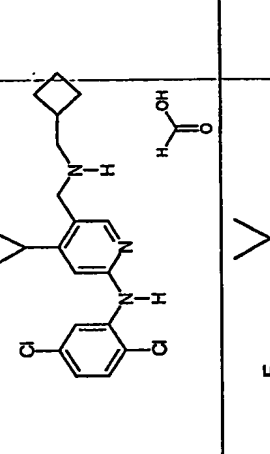

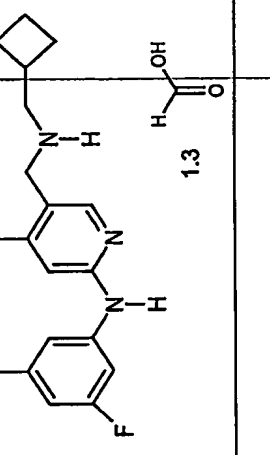

PB60755P

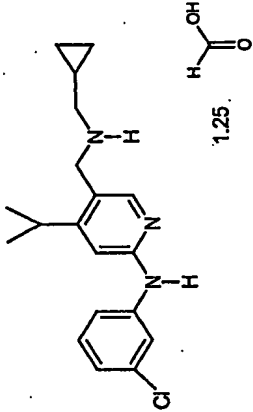

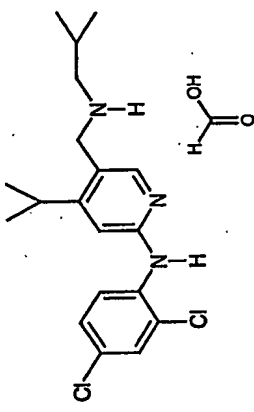

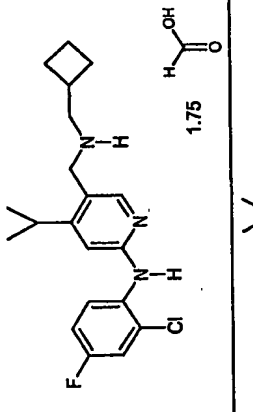

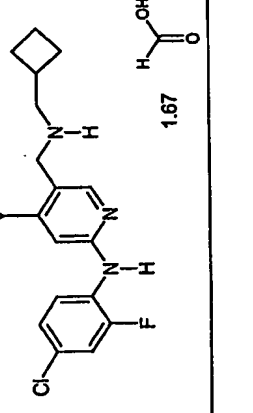

Method A is as for Example 13.

Method B as for Method A, except that the mixture was neutralised with 2N sodium hydroxide instead of neutralised with aqueous saturated sodium hydrogen carbonate

38	2-(2-(2,4-Dichloro-phenylamino)-5- {[(tetrahydro-pyran-4-ylmethyl)- amino]-methyl}-pyridin-4-yl)- propan-2-ol, compound with formic acid (1:1)		A	2.47 424 $C_{21}H_{27}^{35}Cl_2N_3O_2$
39	(3-Bromo-phenyl)-(6-cyclopropyl-5- {[(tetrahydro-pyran-4-ylmethyl)- amino]-methyl}-pyridin-2-yl)-amine, compound with formic acid (1:1.33)		A	2.56 418 $C_{21}H_{26}^{81}BrN_3O$
40	(6-Cyclopropyl-5-{[(tetrahydro- pyran-4-ylmethyl)-amino]-methyl}- pyridin-2-yl)-(3,5-difluoro-phenyl)- amine, compound with formic acid (1:1)		A	2.58 372 $C_{21}H_{25}F_2N_3O$
41	(6-Cyclopropyl-5-{[(tetrahydro- pyran-4-ylmethyl)-amino]-methyl}- pyridin-2-yl)-(3,4-dichloro-phenyl)- amine, compound with formic acid (1:1.43)		A	2.83 406 $C_{21}H_{25}^{35}Cl_2N_3O$

PB60755P

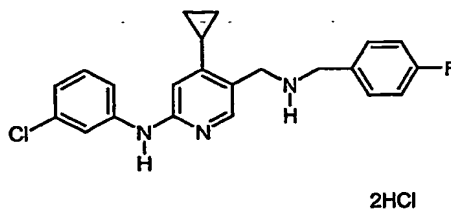

42	(3-Chloro-phenyl)-(6-cyclopropyl-5- {[(tetrahydro-pyran-4-ylmethyl)- amino]-methyl}-pyridin-2-yl)-amine, compound with formic acid (1:1.37)		A	2.62 372 $C_{21}H_{26}^{35}ClN_3O$
43	(4-Cyclopentyl-5-{{{(tetrahydro- pyran-4-ylmethyl)-amino]-methyl}- pyridin-2-yl}-(2,4-dichloro-phenyl))- amine, compound with formic acid (1:0.78)		A	2.74 434 $C_{23}H_{29}^{35}Cl_2N_3O$
44	(3-Chloro-4-fluoro-phenyl)-(5- [(cyclopentylmethyl)-amino]- methyl]-4-cyclopropyl-pyridin-2- yl)-amine, compound with formic acid (1:1.4)		B	281 374 $C_{21}H_{25}^{35}ClFN_3$
45	{5-[(Cyclopentylmethyl)-amino]- methyl]-cyclopropyl-pyridin-2-yl}- (4-fluoro-3-trifluoromethyl-phenyl))- amine, compound with formic acid (1:1.25)		B	2.91 408 $C_{22}H_{25}F_4N_3$

46	(2-Fluoro-3-trifluoromethyl-phenyl)-5-[(isobutylamino-methyl)-4-isopropyl-pyridin-2-yl]-amine, compound with formic acid (1:1.13)	 1.13	B	2.72 384 $C_{20}H_{25}F_4N_3$
47	(3,4-Dichloro-phenyl)-[5-(isobutylamino-methyl)-4-isopropyl-pyridin-2-yl]-amine, compound with formic acid (1:1)	 1.1	B	2.85 366 $C_{19}H_{25}^{35}Cl_2N_3$
48	(3-Bromo-phenyl)-[5-(isobutylamino-methyl)-4-isopropyl-pyridin-2-yl]-amine, compound with formic acid (1:33)	 1.33	B	2.69 378 $C_{19}H_{26}^{81}BrN_3$
49	(3-Bromo-phenyl)-(4-isopropyl-5-[[tetrahydro-pyran-4-ylmethyl]-amino]-methyl)-pyridin-2-yl)-amine, compound with formic acid (1:1)	 1.1	B	2.53 434 $C_{22}H_{30}^{81}BrN_3O$

PB60755P

50	(3-Chloro-phenyl)-{5- [(cyclopentylmethyl-amino)- methyl]-4-isopropyl-pyridin-2-yl}- amine, compound with formic acid (1:1)		B	2.78 358 $C_{21}H_{28}^{35}ClN_3$
51	[5-(Isobutylamino-methyl)-4- isopropyl-pyridin-2-yl]-(3- trifluoromethyl-phenyl)-amine, compound with formic acid (1:1,25)		B	2.73 366 $C_{20}H_{26}F_3N_3$

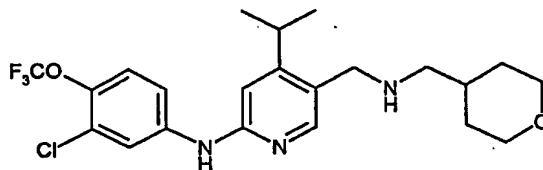

**Example 52: (3-Chloro-phenyl)-{4-cyclopropyl-5-[(4-fluoro-benzylamino)-methyl]-pyridin-2-yl}-amine dihydrochloride**

- 5 This was prepared from Intermediate 4 by the method used for Example 1, but the final product was treated with hydrogen chloride in 1,4-dioxan, stood for 1 hour at room temperature, and then evaporated to give the title compound (28mg).

LC/MS t = 2.76 min, molecular ion observed [MH<sup>+</sup>] 382, consistent with C<sub>22</sub>H<sub>21</sub><sup>35</sup>ClFN<sub>3</sub>

- 10 **Example 53: (3-Chloro-4-trifluoromethoxyphenyl)-(4-isopropyl-5-[(tetrahydro-pyran-4-ylmethyl)-amino]-methyl)-pyridin-2-yl)-amine**

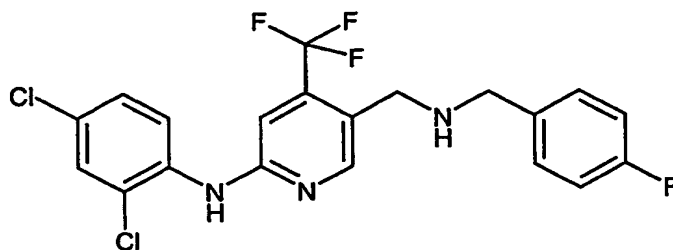

- 15 To a solution of 6-(3-chloro-4-trifluoromethoxyphenylamino)- 4-isopropyl-N-(tetrahydropyran-4-ylmethyl)-nicotinamide (Intermediate 10), (60 mg) in dry tetrahydrofuran (1 ml) was added borane-tetrahydrofuran complex (1.0M in tetrahydrofuran, 0.64 ml) and the solution stirred at 70°C for 4h. Further borane-tetrahydrofuran complex (1.0M in tetrahydrofuran, 0.64 ml) was added and stirring at 70°C continued for 24h. The solution was quenched with methanol and then 6N
- 20 hydrochloric acid (six drops) was added. Stirring at 70°C was continued for 1h and then the solvent was removed under reduced pressure. The residue was purified using the MDAP system detailed at the beginning of the experimental section to afford the title compound as an off white foam (11 mg).

- 25 NMR (MeOD)  $\delta$  2.9-3.1 (8H, d,m), 1.72-1.75 (2H, d), 2.01 (1H, m), 3.05 (2H, d), 3.20 (1H, m), 3.45 (2H, m), 3.96 (2H, dd), 4.28 (2H, s), 6.90 (1H, s), 7.35 (1H, d), 7.50 (1H, dd), 8.04 (1H, d), 8.25 (1H, s).

LC/MS t = 2.6 min, molecular ion observed [MH<sup>+</sup>] 458, consistent with molecular formula C<sub>22</sub>H<sub>27</sub><sup>35</sup>Cl F<sub>3</sub>N<sub>3</sub>O<sub>2</sub>

- 30 **Example 54: (2,4-Dichlorophenyl)-{5-[(4-fluoro-benzylamino)-methyl]-4-trifluoromethyl-pyridin-2-yl}-amine**

PB60755P

6-(2,4-Dichloro-phenylamino)-4-trifluoromethyl-pyridine-3-carbaldehyde (Intermediate 33), (100mg) and 4-fluorobenzylamine (45mg) were dissolved in dry methanol (5ml) in the presence of 3Å molecular sieves and the reaction mixture was stirred at room temperature for 2h. The mixture was diluted with DCM (1ml), then sodium cyano borohydride (27mg) and acetic acid (60μl) were added and the solution was stirred at room temperature for 30 min. The molecular sieves were filtered off, and the filtrate was washed with aqueous 5% potassium carbonate, water, and the dried (MgSO<sub>4</sub>) organic layer was concentrated under reduced pressure. A solution of the residue in DCM was treated with 5% hydrochloric acid, and the precipitate that formed was collected and recrystallised from methanol/ether to yield the title compound (30mg).

NMR (300MHz, DMSO-d<sub>6</sub>) δ 9.49 (br s, 1H), 9.19 (s, 1H), 8.51 (s, 1H), 7.97 (d, 1H); 7.66 (d, 1H), 7.59 (m, 2H), 7.43 (dd, 1H), 7.38 (s, 1H), 7.28 (dd, 2H), 4.21 (br s, 2H), 4.12 (br s, 2H).

MS m/z (EI+); TSQ700; source 180°; 70V; 200uA: 445.1, 443.1, 318.9, 307.0, 285.1.

MS m/z (ESI+): 445 (MH<sup>+</sup>).

Formulations for pharmaceutical use incorporating compounds of the present invention can be prepared in various forms and with numerous excipients. Examples of such formulations are given below.

#### Example 55: Inhalant Formulation

A compound of formula (I) or a pharmaceutically acceptable derivative thereof, (1 mg to 100 mg) is aerosolized from a metered dose inhaler to deliver the desired amount of drug per use.

#### Example 56: Tablet Formulation

<u>Tablets/Ingredients</u>	<u>Per Tablet</u>
1. Active ingredient (Compound of formula (I) or pharmaceutically acceptable derivative)	40 mg
2. Corn Starch	20 mg
3. Alginic acid	20 mg
4. Sodium Alginate	20 mg
5. Mg stearate	1.3 mg

Procedure for tablet formulation:

- Ingredients 1, 2, 3 and 4 are blended in a suitable mixer/blender. Sufficient water is added portion-wise to the blend with careful mixing after each addition until the mass is of a consistency to permit its conversion to wet granules. The wet mass is converted to granules by passing it through an oscillating granulator using a No. 8 mesh (2.38 mm) screen. The wet granules are then dried in an oven at 140°F (60°C) until dry. The dry granules are lubricated with ingredient No. 5, and the lubricated granules are compressed on a suitable tablet press.

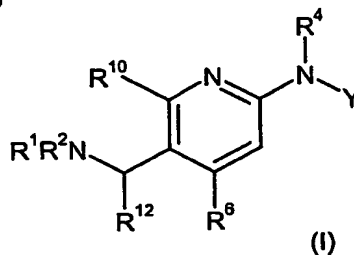

**Example 57: Parenteral Formulation**

- 10 A pharmaceutical composition for parenteral administration is prepared by dissolving an appropriate amount of a compound of formula (I) in polyethylene glycol with heating. This solution is then diluted with water for injections Ph Eur. (to 100 ml). The solution is then rendered sterile by filtration through a 0.22 micron membrane filter and sealed in sterile containers.

PB60755P

## Claims

1. A compound of formula (I);

5

wherein:

Y is phenyl, unsubstituted or substituted with one, two or three substituents;

R<sup>1</sup> is selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-6</sub> cycloalkyl, or halosubstituted C<sub>1-6</sub> alkyl;

R<sup>2</sup> is (CH<sub>2</sub>)<sub>m</sub>R<sup>3</sup> where m is 0 or 1;

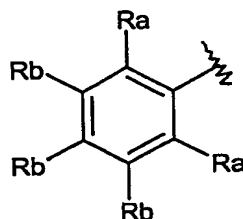

10

or R<sup>1</sup> and R<sup>2</sup> together with N to which they are attached form an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl ring;

R<sup>3</sup> is an unsubstituted or substituted 4- to 8- membered non-aromatic heterocyclyl group, an unsubstituted or substituted C<sub>3-8</sub> cycloalkyl group, an unsubstituted or substituted straight or branched C<sub>1-10</sub> alkyl, an unsubstituted or substituted C<sub>5-7</sub> cycloalkenyl, R<sup>5</sup> or R<sup>3</sup> is an optionally

15

substituted 5- to 6- membered aromatic heterocyclyl group, or group A:

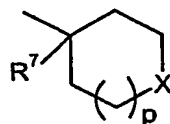

(A)

R<sup>4</sup> is selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>3-6</sub> cycloalkyl, or halosubstituted C<sub>1-6</sub> alkyl, COCH<sub>3</sub>, or SO<sub>2</sub>Me;

20

R<sup>5</sup> is

wherein p is 0, 1 or 2, and X is CH<sub>2</sub>, O, S, SO or SO<sub>2</sub>;

R<sup>6</sup> is halo, an substituted or unsubstituted (C<sub>1-6</sub>)alkyl, substituted or unsubstituted (C<sub>3-6</sub>)cycloalkyl, or a 4- to 7- membered non aromatic heterocyclic group and R<sup>10</sup> is hydrogen or R<sup>10</sup> is halo, an substituted or unsubstituted (C<sub>1-6</sub>)alkyl, substituted or unsubstituted (C<sub>3-6</sub>)cycloalkyl, or a 4- to 7- membered non aromatic heterocyclic group and R<sup>6</sup> is hydrogen:

25

R<sup>7</sup> is OH, C<sub>1-6</sub>alkoxy, NR<sup>8a</sup>R<sup>8b</sup>, NHCOR<sup>9</sup>, NHSO<sub>2</sub>R<sup>9</sup>, SOqR<sup>9</sup>;

R<sup>8a</sup> is H or C<sub>1-6</sub>alkyl;

R<sup>8b</sup> is H or C<sub>1-6</sub>alkyl;

R<sup>9</sup> is C<sub>1-6</sub>alkyl;

R<sup>12</sup> is hydrogen or C<sub>1-6</sub>alkyl;

q is 0, 1 or 2;

R<sub>a</sub> can be independently selected from hydrogen, fluoro, chloro or trifluoromethyl;

5 R<sub>b</sub> can be independently be selected from hydrogen, C<sub>1-6</sub> alkyl, C<sub>1-6</sub> alkoxy, haloC<sub>1-6</sub> alkoxy, hydroxy, cyano, halo, sulfonyl, CONH<sub>2</sub>, COOH or NHCOOC<sub>1-6</sub>alkyl; and pharmaceutically acceptable derivatives thereof.

2. A compound as claimed in Claim 1 selected from Example 1 to 54.

10

3. A pharmaceutical composition comprising a compound as claimed in claim 1 or 2 or a pharmaceutically acceptable derivative thereof and a pharmaceutical carrier or diluent thereof.

4. A pharmaceutical composition as claimed in claim 3 further comprising a second therapeutic agent.

15

5. A method of treating a human or animal subject suffering from a condition which is mediated by the activity of cannabinoid 2 receptors which comprises administering to said subject a therapeutically effective amount of a compound of formula (I) as claimed in claim 1 or 2 or a pharmaceutically acceptable derivative thereof.
